

**MAXIMUS**  
THE FISHING GLADIATOR

## **Dear Friends!**

We are glad to welcome you at the pages of our catalogue of Maximus fishing rods. All our products are made of advanced high quality materials using modern technologies and innovations. In production of our fishing rods we use well-proven carbon fiber made in Japan and Korea. All the series are equipped with high quality components designed in accordance with the latest developments and concepts. Before becoming available for sale each new series is being multiple tested by the manufacturer and has a manufacturer's warranty.

The constantly changing fishing world never stops and we understand it trying to be at the cutting edge of modern fishing and produce specialized rods for any fishing style you would choose. In our range you can find rods for jigging, jerkbaiting, twitching, casting, for fishing with bombardia and compact travel rods – we have everything! Year by year we constantly work on improving and expanding the range of our products and applying of state-of-the-art technologies and modern materials.

# X-TYPE REEL Centre pin

**NEW**

Centre pin reel Maximus X-Type 110 is machined from a solid block of aviation aluminum A6061-T6 and produced on the most modern milling and turning equipment in South Korea. It has a modern design, durable double anodizing with high degree of polishing for ideal look and maximum corrosion resistance. Being of light weight for its size (158g), the reel has an incredibly strong frame and spool. The spool is mounted on two high-quality Japanese NMB ball bearings. It has a V-Shape design for optimal line spooling. The reel is equipped with standard ratchet brake and on/off button. Two handles are mounted on the spool for convenient spooling of the line and reel balance. This reel is easy to use and its settings are absolutely clear. Among the advantages of the reel there are also reliability, toughness and durability. It is ideal for fishing in streams, trolling and jigging. Reel is equipped with high-quality EVA (neoprene) pouch.

## Specification:

- Spool outer diameter 108 mm
- Cut from a solid block of aviation aluminum A6061-T6
- 2 high-quality Japanese NMB ball bearings
- Durable double anodized parts of the reel
- V-shaped spool design for quality line spooling
- Weight of the reel: 158g (spool 75g / frame 83g)
- Made in Korea
- Supplied with high-quality EVA reel pouch

Item No.	Model	Spool outer diameter	Number of bearings	Weight, g.	Aluminum Grade

# Technologies and Specifications

HIGH MODULUS NANO GRAPHITE FIBER is an exclusive high modulus carbon fiber material with minimum content of binder and unidirectional carbon fiber structure, which provide graphite of maximum density. As a result, we get an extremely light-weight blank combined with maximum strength and sensitivity.

SANDWICH CONSTRUCTION is a combination of several high modulus carbon fiber materials in one blank. Due to multiple layers of various materials, we managed to reinforce the middle and the butt sections without increasing the diameter of the blank. Whereas the tip remains flexible and sensitive providing perfect lure control and good recognition of the bottom contour regardless of fishing conditions.

WXW-X-WRAPPING CARBON Blanks based on the technology of X-Wrapping carbon fibers are highly resistant to bending and twisting which allows producing of light, powerful and very strong rods

X-JOINT CONSTRUCTION is a special joint for spigot rods in which two sections are connected by means of a carbon tube insertion. This type of a joint doesn't change the action and bend of a blank, providing maximum reliability, sensitivity, functionality and casting characteristics specific for one-section rods.

C.W.P. (Carbon Wrapping Power Connection) is a special carbon fiber reinforced band at the lower outer part of tip section. This type of connection is used to increase stiffness, strength and bend reliability on the rods with Over Steek joint.

SUPER SENSITIVE SYSTEM is a reel seat of a special design with elements made from various materials with good vibration characteristics (aluminum, carbon). It provides high rod sensitivity, informing an angler about every bottom touch, slight changes in lure action and about even the most delicate fish bite.

WARM REEL SEAT is a reel seat specially constructed in such a way that all elements touched by an angler's palm are made from "warm" materials such as cork or EVA. It makes fishing more comfortable especially in cold weather conditions.

SST (SOFT SENSITIVE TIP) is a technology specially designed to increase rod sensitivity. It is used for blanks with fast and extra fast action. Blanks based on SST technology are characterized by stiff middle and butt sections combined with soft responsive and flexible tips (about 1/3 of a blank). On retrieve the soft tip is always engaged, and after hitting the bottom it 'rebounds' immediately into the angler's hand letting him know about the touch of the bottom. SST technology helps to improve sensitive characteristics of a tackle, to achieve more effective lure control and to indicate a slightest change in retrieving.

# Technologies and Specifications

NONSLIP COATING is a special coating that prevents angler's hand from sliding off the fishing blank. Handle is coated by antifriction granules that help to prevent sliding and improve grip control.

POWERED GRIP CONSTRUCTION – the main idea of this construction is to ensure the perfect grip of a handle. It can be found on fishing rods designed to endure extreme loads, when it is important that handle will be reliably fixed in angler's hand. A special perforation is applied to the upper part of a handle made from thick fine-pored neoprene (EVA) which ensures a perfect grip and helps to prevent a rod from twisting and sliding. This is especially important when you have a long and exhausting fight with a big trophy.

MULTI-TIP CONCEPT – Rods based on this concept are equipped with two tips for different purposes: a) 1st Interline Tip (fishing line runs inside the blank) – for fishing at depths up to 100m – a powerful blank construction due to equal load distribution. b) 2nd tip with classic rigging (LC guides frame) is ideal for fishing at depths of more than 100m where the quick sinking of a lure is more important than power characteristics of a blank. Each rod of this series is supplied with two tips which makes it really universal in the very best sense of the word. If you have lost or broken one tip, you can continue fishing using the second one. In fact, you will get two rods in one.

TRAVEL DESIGN – fishing rods based on the “Travel” concept are very compact when folded which makes them ideal for those who like travelling. This is a spinning rod which is “always with you”. It can be easily put into a standard suitcase or a travel bag. It will become your best friend in a business trip, a family vacation or any other journey when it’s not possible to take a bulky tube with standard rods.

KIGAN INDUSTRY GROUP (KOREA) is the leader in production of high quality rod components from South Korea (guides, handles, reel seats) with 30 years of experience in this field. The company develops its own advanced technologies. Over the last few years it has introduced to the market a lot of innovative concepts and developments. The KIGAN trademark can be seen on each original product made by this company to guarantee the top quality.

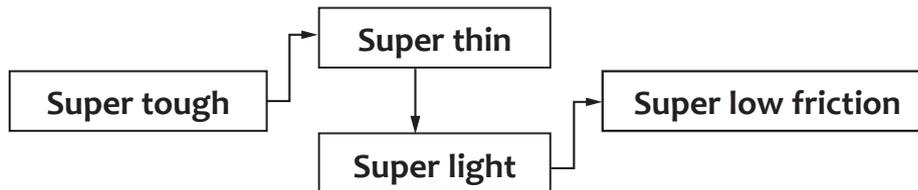

Fuji KOGYO CO LTD. (Japan) is the number one manufacturer of high quality fishing accessories (guides, cork handles and reel seats). Today FUJI is the undisputed market leader in production of high quality rod components. The FUJI trademark can be seen on each product made by this company. FUJI guides have such logo on their frame side to guarantee the best Japanese quality.

## THIS IS HOW AN IDEAL ROD GUIDE LOOKS LIKE!

What we generally expect from the ideal guides made from metal and ceramic is the increased potential of a fishing rod, reel and line. The newly developed ceramic is stronger than silicon carbide (SiC) and allows to reduce the size and weight of guides. New TORZITE guides are the best you can imagine!

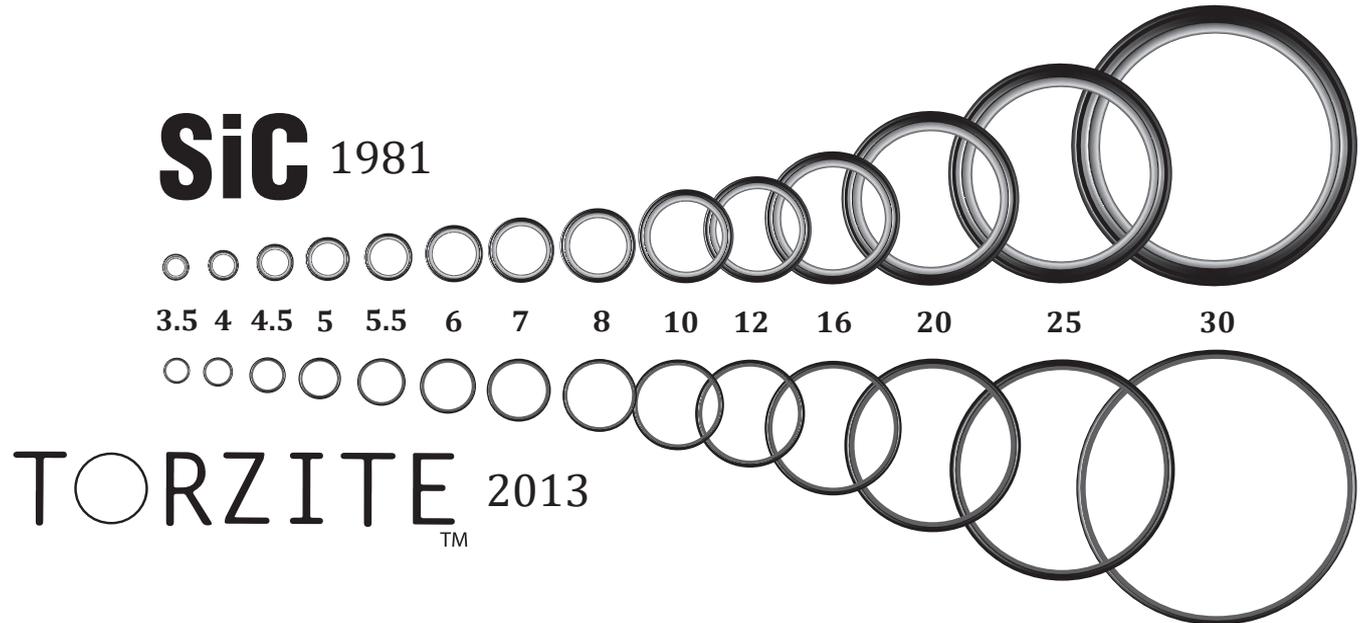

## THE NEW DEVELOPED CERAMIC

## SUPER THIN

SiC guides have been the best ceramic guides since 1981. The discovery of a new TORZITE material in 2013 allowed to create guides of ideal shape and unique thinness.

Due to incredible thinness of the new guide, its weight has been reduced and the inner diameter has been increased.

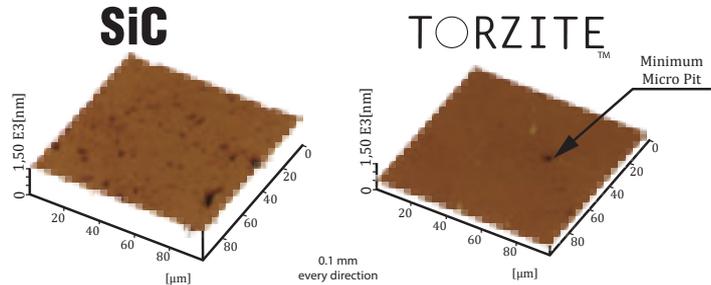

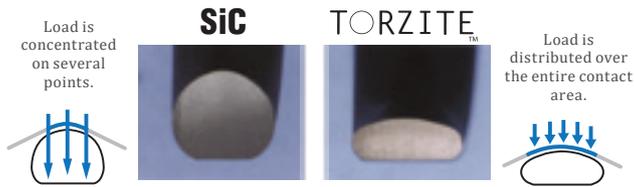

## SUPER LIGHT

Torzite guides weigh approximately 40% less than SiC guides. Together with titanium frame it makes the difference about 10%. Moreover, the inner diameter of Torzite guides is 15% more than the one of SiC guides.

## SUPER LOW FRICTION

Torzite guides have more smoothly rounded shape that enables to increase an area of contact between the fishing line and the surface of a guide twice. Thereby, the pressure on a guiding ring is reduced by half compared with SiC guides.

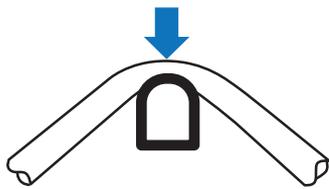

Torzite material features by minimization of micro-pores which wear out the fishing line. The mirror coating of Torzite material is much better than that of SiC guides.

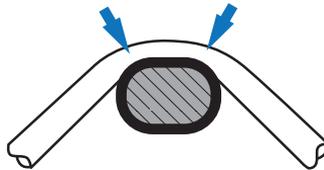

## LINE ANTITWISTING

The shape of internal surface of Torzite guides help to protect fishing line. Fishing line tends to become flat while being used under pressure. When one side of a fishing line becomes flat, it starts to twist losing its properties. This causes some problems with fishing line.

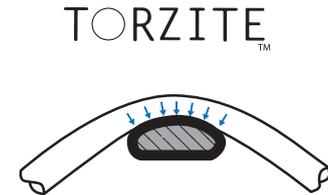

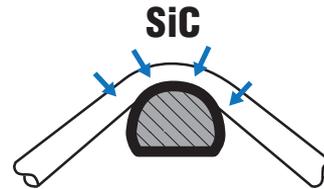

### Passing of the fishing line through guides

# Technologies and Specifications

TITANIUM FUJI SIC – ultra light and durable guides in titanium frame with silicon carbide ring material (SIC). Titanium is much lighter and stronger than stainless steel. Such guides are used on fishing rods based on modern high-modulus carbon blanks and help to minimize residual vibrations during casting. Guides with titanium frames reduce total weight of a tackle and optimize its casting characteristics. A set of TITANIUM FUJI SIC guides is comparable in weight with one guiding ring made of stainless steel.

MINI GUIDE SYSTEM is a modern concept which offers to use the smallest possible guides in order to minimize the total weight of a tackle. Since micro guides are placed very close to the tip section, a larger quantity of them is required for effective performance. But due to their extremely small sizes the total weight of all guides is less than the weight of standard sized ones and it has positive impact on rod functionality.

Use of Mini Guide System helps to improve several characteristics:

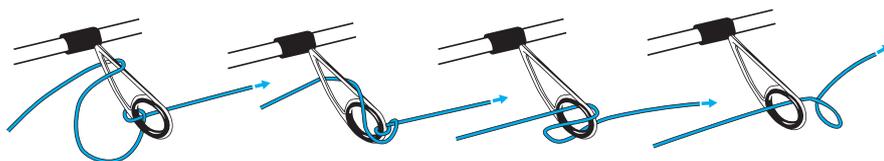

- Reduce weight of the rod
- Improve balance of the rod
- Increase casting distance
- Improve casting accuracy
- Significantly improve sensitivity

This technology is used only with KR-Guide Concept and 3D-Guide System.

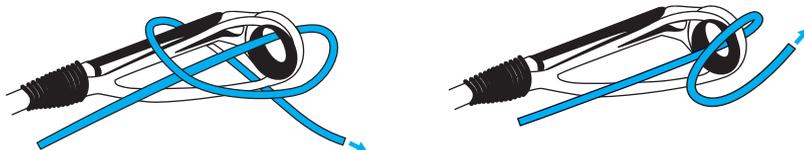

TANGLE FREE – due to a special oval shape of the ring and an accurately calculated slope of the frame, tangles are completely eliminated.

Loops that are formed during casting are being easily untangled because of the unique Tangle Free shape of the guide.

ANTITWISTING TIP is a special “tang” design which prevents line overlap during casting. This top is designed in such a way that all possible tangles are sliding from the tip because of the spherical stiffeners, thereby avoiding any damages of a rod or loss of a bait.

SIC – Guides are available with silicon carbide rings (SIC), generally acknowledged as the best material to minimize friction. SIC rings increase casting distance up to 10% without any additional efforts and are suitable for both monofilament and braided lines.

ALCONITE – guides with perfectly smooth ceramic rings made of aluminum oxide. Such rings help to increase casting distance and reduce friction by any braided line.

ZIRCONIA – A combination of a new type frame with heavy-duty zirconia rings makes “Kigan Zirconia” guides one of the best on the market. They feature extreme durability and fine granulation and exceed many types of ceramic rings in these characteristics.

# Technologies and Specifications

GOLD CERMET – heavy-duty cermet coated with TiN. Besides hardness, perfectly smooth surface and durability, it has very low weight. TiN is a high-tech golden colour alloy featuring extreme toughness, optimum fine granulation and low weight.

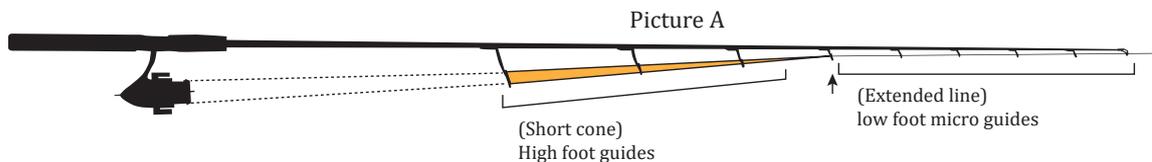

KR-GUIDE CONCEPT (FUJI-JAPAN) - the main idea of this concept is to reduce resistance when braided line is flowing through the guides along the blank. “Fuji Kogyo Co. Ltd” engineers have studied thoroughly behavior of unreeled line cone and concluded that the first running guide from the reel side should not always be very big. The most important thing is to place it at a proper distance from the blank and at a right angle. The main idea is to keep the line away from the blank in order to minimize friction, slow down vibrations of the line as quickly as possible owing to ‘short cone’, and at the same time to unload the tip using smaller guides. Such improved scheme of a line flow removes a ‘beating effect’ and overall decrease of weight reduces inertia of a rod, thus casting distance can be increased. A larger number of guides considerably improve sensitivity only because there are more points of contact between the line and the blank and line oscillations are being transmitted to the blank via guide frames. Moreover, lower guide foot at a tip section brings line closer to the blank, so vibrations from the frames make a shorter distance to the blank and therefore sensitivity increases. (Picture A)

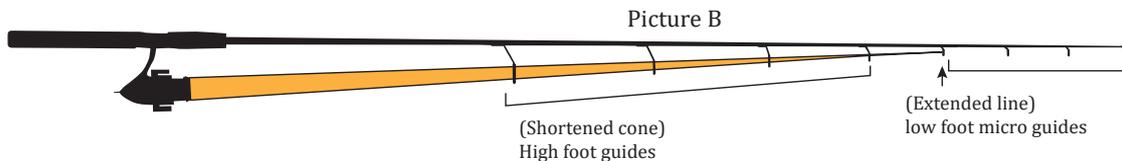

3D-ZH GUIDE SYSTEM (KIGAN-KOREA) - Korean company ‘Kigan Industry Co., Ltd’ has introduced a new generation of guides - ‘Kigan 3D-ZH Guide’. Using a new technology of 3D press processing, engineers managed to create the most lightweight and durable frames. A complex profile of a frame maximizes stiffness and at the same time allows using less metal thus reducing total weight of end-product. When creating a frame design, the main task was to choose the right form to be used safely even with very thin and soft braided lines without any risk of tangles. When placing the guides in accordance with 3D-ZH Guide System, the task was to reduce resistance and let the line flow smoothly through the guides in order to increase casting distance and accuracy. More frequent placing of micro guides on the blank also helps to improve rod sensitivity. (Picture A)

K-GUIDE SYSTEM - is a similar but simplified version of KR-Guide Concept. Use of smaller guides with lower weight and their more frequent placement contribute to perfect rod performance. Guides placement in accordance with K-Guide System maximizes blank casting characteristics and helps to distribute load on retrieve (Picture A).

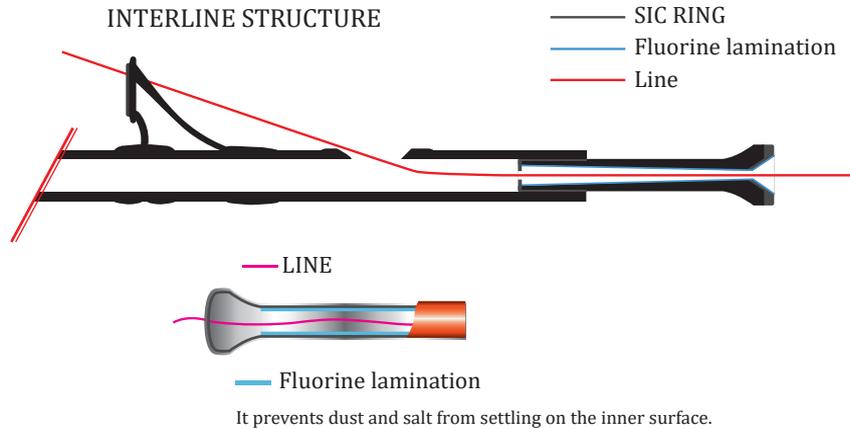

N-GUIDE SYSTEM – features special guides' placement for maximum casting distance. It suggests more frequent placement of micro guides on high feet. It helps to achieve better taper input and reduce resistance when braided line is passing through the guides, so casting distance and accuracy can be optimized. Guides placement in accordance with this system can evenly distribute load along the blank (Picture B).

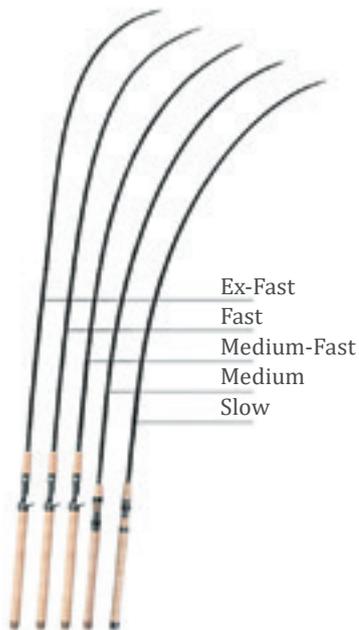

# Technologies and Specifications

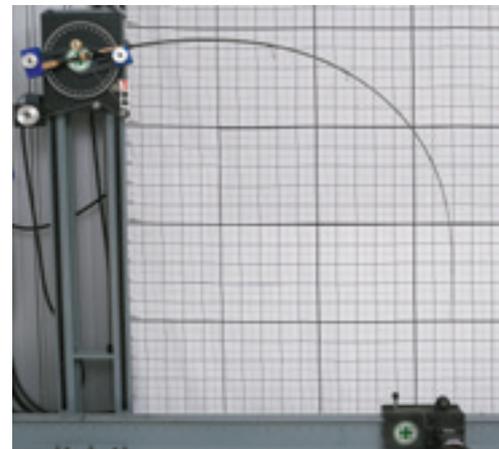

INTERLINE – In accordance with Interline concept the fishing line runs inside the blank with the help of a system of many inner guides. Such constructive engineering solution provides ideal load distribution over the blank under maximum pressure which significantly increases the reliability of a tackle. Another distinct advantage of Interline concept is a complete lack of any line twisting which is especially important during sea fishing with pilker or other jigging lures. Interline rods become more and more popular for sea fishing because such construction has some undoubted advantages comparing with rods with standard guides. All Interline rods are equipped with a special cable for passing the fishing line inside the blank.

**BLANK ACTION** - Differences between various types of blank actions can be clearly seen in the picture on the left. As you can see, rods with extra-fast and fast action have very tough and powerful butt sections, so when casting only the tip is involved. On the contrary, rods with slow action have less stiffness in the butt section and when casting the entire blank works. Fast action blanks help to inform an angler about all bottom details or delicate bites and they are sudden at strike. In addition, fast action rods are very good for the most accurate casting. Slow action blanks are well suited for long distance casting. Rod bends along the whole length so it helps to keep the line from breaking and tire out the fish. Fishing rods with medium action are the most versatile.

### Raptor-X model testing

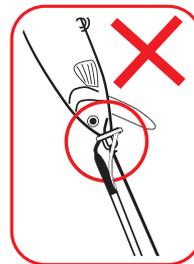

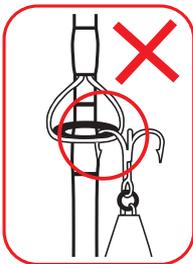

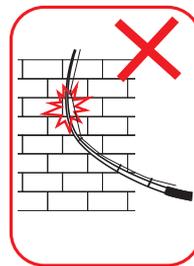

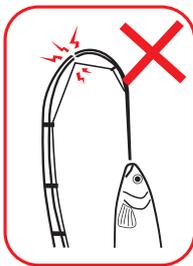

Before a new model goes to production, it is being examined at multiple levels and tested for bending. All rods have manufacturer's warranty.

# SAFETY RULES

 Attention! Please do not break the following safety rules! Abidance by these rules will help to extend the life of your fishing rod.

 We remind you that careful attitude towards your rod will help to enjoy your favorite hobby – fishing – for a long time.

 Please, transport your rods in a special tube in order to avoid rod breakage.

## **ATTENTION!**

Fishing rods made from carbon are very good conductors of electric current, so please follow the safety precautions below:

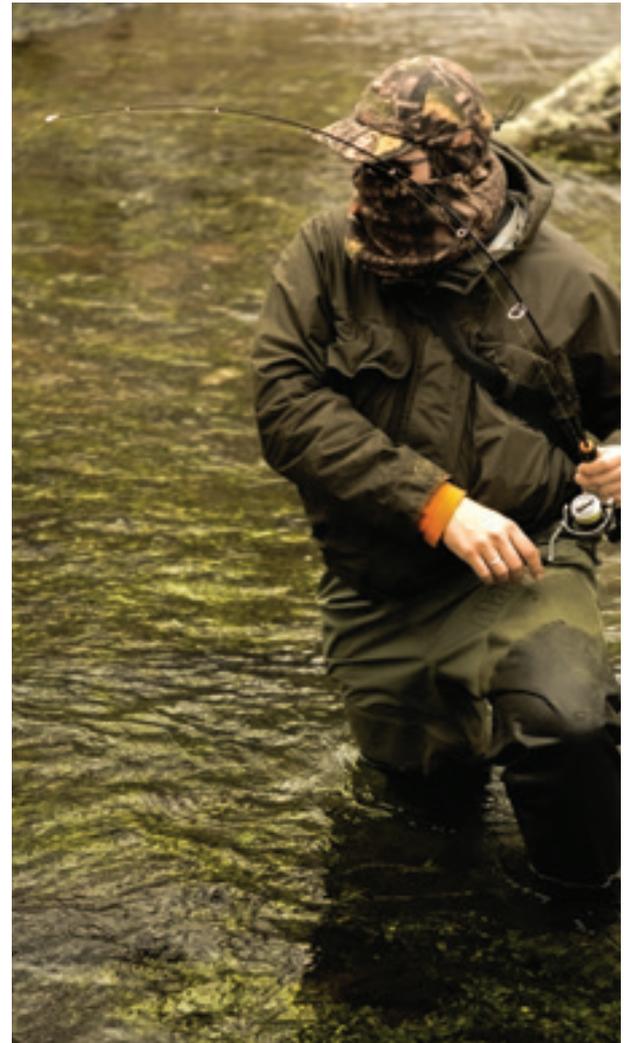

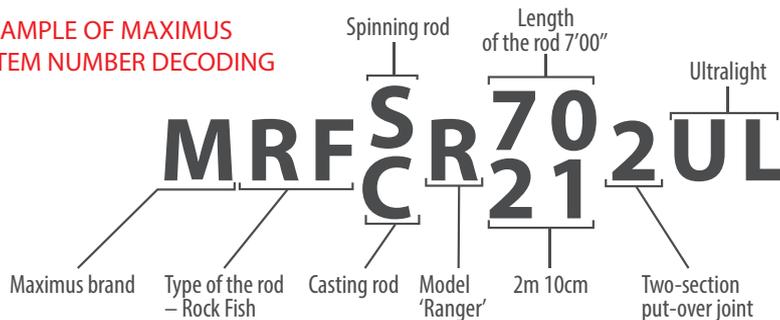

Do not use carbon fishing rods near high-voltage power lines. Even in the absence of actual contact between a rod and an electric wire, an electrical arc can occur and as a result you may be seriously injured.

Do not use carbon fishing rods during thunderstorms. Carbon is a very good conductor of electric current and can attract lightning.

## WINNER Spinning Rods

**NEW**

This is a series of budget spinning rods with fast action blanks developed for fishing with different types of lures: wobblers, spinners, spoons and jigs. It's a great choice for those who need an inexpensive but multifunctional and quality spinning rod. Its blank is made of IMF carbon, equipped with lightweight SIC guides, ergonomic "warm" reel seat and functional high-quality EVA (neoprene) handle. Modern lightweight fast action blanks allow to make the most accurate casts and have great sensory characteristics. Powerful butt section copes perfectly with any big predator fish. Winner Spinning rods are superb for pike, zander, trout and perch fishing both on rivers and lakes.

### **Blank:**

- Material: IMF carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip
- Light weight, single foot
- Standard guide placement

### **Handle:**

- Ergonomic design
- Material: EVA (neoprene)

### **Reel seat:**

- Warm Reel Seat, ergonomic design

## ARCHER Spinning Rods

This is a series of budget spinning rods with medium-fast action blanks which meet the highest requirements. Characterized by lightness, high sensitivity and power, Archer rods are ideal for all kinds of predator fishing and will be of great demand among both experienced anglers and beginners. Blank is made of IMF carbon, equipped with lightweight SIC guides and reliable classic reel seat. Archer rods combine functionality and modern design, have very high sensitivity and superb casting performance.

**Blank:**

- Material: IMF carbon
- Medium-Fast Action
- 2 sections
- Put-over joint

**Guides:**

- SIC guides
- Antitwisting Tip
- Light weight, single foot
- Standard guide placement

**Handle:**

- Ergonomic design
- Material: cork

**Reel seat:**

- Classic screw down design

**Accessories:**

- Wire loop for hook keeping

## BULLET Spinning Rods

**NEW**

Maximus Bullet is a series of reliable spinning rods with fast action blanks designed for fishing with different types of lures. This series is available in a wide range of lengths and tests making it possible to choose the right rod for any fishing situation - whether fishing from the shore or a boat, using heavy spoons or small wobblers. Blank is made of IMF carbon, equipped with lightweight South Korean SIC guides, ergonomic EVA (neoprene) handle and reliable classic reel seat. Guides are placed in accordance with N-Guide Concept which significantly increases long casting characteristics. Spinning rods of this series are of high quality, with excellent sensitivity and superb casting performance at a very reasonable price! Powerful and sensitive Bullet blank gives fish no chance to escape!

### **Blank:**

- Material: IMF carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip

## WORK HORSE-X Spinning Rods

**NEW**

Extremely popular Work Horse spinning rods have been restyled but saved perfect value for money. Rods of the renewed series are fitted with SIC guides in Tangle Free frames which help avoid tangles. The guides are placed in accordance with ultra-modern K-Guide System concept. The blank is made of IMF carbon equipped with ergonomic EVA (neoprene) handle and reliable classic reel seat. Work Horse-X rods are really versatile because they combine high quality equipment and good value for money which make them extremely popular among all anglers. Due to properly built Fast action blank, these rods are very powerful but surprisingly light weighted. Elastic tip provides ultimate feedback when fishing with lures of entire test range. Powerful butt section can perfectly handle any big fish.

### **Blank:**

- Material: IMF carbon
- Fast Action
- 2 sections
- Put-over joint

## ZENITH-X Spinning Rods

**NEW**

Zenith rods were restyled in 2016 and are now produced using index X. This is a series of multipurpose high performance rods. Zenith-X series spinning rods are of high quality, with excellent sensitivity and superb casting performance at a reasonable price. The blank has been slightly changed and now it is classified as Medium-Fast action compared to Medium action blank on the previous version. The rod is now equipped with brand new accessories, modern guides and hi-tech “warm” reel seat. The blank is made of IMF carbon and equipped with ergonomic fine-pored EVA (neoprene) handle. The restyled Zenith-X rods are fitted with SIC guides featuring Tangle Free frames which help eliminate any possible line tangle. Guides are placed in accordance with ultra-modern K-Guide System concept. Ideal rod balance and elaborate design of this model help an angler make very accurate casts, recognize the bottom relief and feel confident while retrieving any fish.

### **Blank:**

- Material: IMF carbon
- Medium-Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame design
- Light weight, single foot
- K-Guide System

### **Handle:**

- Ergonomic design
- Material: EVA (neoprene)

### **Reel seat:**

- Warm Reel Seat, ergonomic design

### **Accessories:**

- Wire loop for hook keeping

## WILD POWER-X Spinning Rods

This is an updated series. Well known spinning rods have been restyled, but kept perfect value for money. Rods of new series are fitted with SIC guides in Tangle Free frames which help to eliminate tangles. They are placed in accordance with ultra-modern K-Guide System concept. Handle and reel seat have also been seriously changed. Now handle is made from two-coloured durable fine-pored neoprene (EVA) and a special 'warm' reel seat is used for better tactile comfort. Handle design makes it possible to use two types of grip: first – classic, second – sport, when a forefinger is put directly on the blank thereby increasing its sensitive characteristics. Wild Power-X rods are really versatile, because they combine high level of equipment and quite reasonable price which make them extremely popular among all anglers.

### **Blank:**

- Material: IMF carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame construction
- Light weight, single foot
- K-Guide System

### **Handle:**

- Ergonomic design
- Material: EVA (neoprene)

### **Reel seat:**

- Warm Reel Seat, ergonomic design
- Super Sensitive System

## STEALTH-X - TELE Spinning Rods

This is an updated series of popular telescopic Stealth rods. New version of telescopic rods of this series has compact folding design and keeps all the advantages of put over rods, so they will be very useful for travelers. Blank is made from IMS graphite fitted with 'Warm' reel seat, up-to-date guides with Tangle Free frame construction which helps to eliminate all possible line tangles. Spinning rods are fitted with premium quality SIC guides made in South Korea which are placed in accordance with K-Guide System concept. The new version of Stealth rods has a reel seat which incorporates Super Sensitive System for better vibration transmittance. A good value for money makes them the best choice among the similar rods offered on the market.

### **Blank:**

- Material: IMF carbon
- Fast Action
- Telescopic construction

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame construction
- Light weight, single foot
- K-Guide System
- One sliding guide on the tip

### **Handle:**

- Ergonomic design, light weight split handle style
- Materials: cork and EVA (neoprene)

### **Reel seat:**

- Warm Reel Seat, ergonomic design

### **Accessories:**

- Guides protective cap

\*Transport length in the table does not include guides' protective cap. In order to get the total length including protective cap, add 3 cm to the figures shown in the table.

## HIGH ENERGY-X Spinning Rods

This is an upgraded version of the popular High Energy series. The use of modern materials and accessories allowed to create a perfectly balanced in all aspects spinning rod to satisfy the most experienced anglers. The blank is made of high modulus HME carbon fitted with a “warm” reel seat and modern guides with Tangle Free frame which helps avoid any possible line tangles. The new version of High Energy is fitted with SIC guides produced in South Korea which are placed in accordance with the advanced K-Guide System concept. A good value for money makes High Energy-X the best choice among any similar rods offered on the market. Regardless of a type of fishing or a kind of lure you prefer, or a fish you want to catch – these rods are so perfectly balanced, that you can always control the lure and feel the most cautious bites. Due to the use of a high-modulus carbon, the tough but elastic blank enables you to fight with any big fish giving it no chance to escape.

### **Blank:**

- High modulus HME carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame design
- Light weight, single foot
- K-Guide System

## STRIKER-X Spinning Rods

This is an advanced version of the well-known spinning rods which raises the bar to a new level whereas good value for money inherent to this series remained the same. Blank is manufactured from high modulus HME carbon and also has remained unchanged. Apart from that, new accessories, modern guides and high-tech reel seat have been used. New version of Striker rods is provided with SIC guides featuring Tangle Free frames. Guides are placed in accordance with ultra-modern K-Guide System concept. Reel seat has also been seriously changed. Producers have made its construction more sensitive, improved even the very successful Super Sensitive System technology. Cork extension nut has been changed to a carbon one which is a better vibration transmitter. Due to use of modern materials and high-quality rod components this series combines excellent casting performance, high sensitivity and a large amount of power.

### **Blank:**

## BLACK WIDOW Spinning Rods

Black Widow is an ideal choice for those who are looking for a universal high-tech rod at a reasonable price. This is a successful attempt to combine a high-quality blank and a good value for money. Fast action, medium stiffness and high modulus IMSE carbon allow using it for jigging and twitching, as well as for fishing with spinners, spoons and wobblers. High quality Kigan Zirconia guides placed in accordance with modern 3D-Guide and Mini Guide Systems are supplemented with classic FUJI reel seat and “warm” neoprene handle. Excellent sensitivity, long casting distance and comfortable retrieve make this rod useful for catching different fish using various techniques.

### **Blank:**

- High modulus IMSE carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- Kigan guides with Zirconia inserts
- Antitwisting Tip
- Tangle Free frame design
- Mini Guide System, maximum light weight, single foot
- 3D-Guide System

### **Handle:**

- Ergonomic design
- Material: EVA (neoprene)

### **Reel seat:**

- Classic screw down design

### **Accessories:**

- Wire loop for hook keeping

## SMUGGLER travel Spinning Rods

This is a great choice for those who need a compact hi-tech spinning rod for travelling. It is sometimes expensive and not comfortable to travel by plane or train with an additional baggage piece. So we have launched a fully-featured compact spinning rod with put-over connection. It is based on the very popular blank of High Energy-X series produced in accordance with the Travel concept in 4 sections. New series rods have SIC guides with Tangle Free frames helping to prevent any line tangles. Guides are placed in accordance with ultra-modern K-Guide System concept. Handle is made from durable fine-pored EVA. Smuggler rods are equipped with the most comfortable “warm” reel seat. Due to use of modern materials and high-quality rod components this series combines excellent casting performance, high sensitivity, a large amount of power and what is more important – incredibly compact transport length!

### **Blank:**

- High modulus HME carbon
- Fast Action
- 3-4 sections
- Put over, multi-section “Travel” construction

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame design
- Light weight, single foot
- K-Guide System

### **Handle:**

- Ergonomic design
- Material: EVA (neoprene)

### **Reel Seat:**

- Warm Reel Seat, ergonomic design
- Super Sensitive System

### **Accessories:**

- Semi-rigid protective case with a zipper

# ULTIMATUM Spinning Rods

**NEW**

New series of spinning rods Ultimatum by Maximus is an ideal choice for those anglers who are looking for a universal high-tech rod at a reasonable price. Ex-Fast action, medium stiffness, high modulus IMSE carbon – all these characteristics allow using it for jigging and twitching, as well as for fishing with spinners, spoons and wobblers. Excellent sensitivity, long casting distance and comfortable retrieve make this rod useful for catching different fish using various techniques. Ultimatum blank is equipped with high quality Kigan Zirconia Mini Guides placed in accordance with 3D-Guide System. Ergonomic handle, FUJI “warm” reel seat with carbon resonator (Super Sensitive System) which provides greater sensitivity “in hand”, together with Ex-Fast action blank made of high modulus carbon – all these make Ultimatum rod an incredibly informative fishing tackle.

## **Blank:**

- High modulus IMSE carbon
- Ex-Fast Action
- 2 sections
- Reinforced put-over joint (WXW-X)

## **Guides:**

- Kigan guides with Zirconia inserts
- Antitwisting Tip
- Tangle Free frame design
- Mini Guide System, maximum light weight, single foot
- 3D-Guide System

## **Handle:**

## MANIC twitching Spinning Rods

This is an Ex-Fast action spinning rod specially designed for twitching but also can be used for fishing in snags or underwater vegetation and jig fishing. Thanks to Ex-Fast Action blank, spinning rod has an incredible margin of power necessary when fighting with a fish on forced retrieve, fishing in snags and in other difficult situations. Blank is made from high modulus HME carbon, equipped with “warm reel” seat featuring Super Sensitive System technology. Manic rods are fitted with SIC guides with Tangle Free frames helping to prevent any line tangles. Guides are placed in accordance with modern K-Guide System concept. Ideal balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and feel confident while retrieving any fish regardless of its size.

### **Blank:**

- High modulus HME carbon
- Ex-Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tangle Free frame design
- Mini Guide System, maximum light weight, single foot
- K-Guide System

### **Handle:**

- Ergonomic design, light weight split handle
- Material: cork

### **Reel Seat:**

- Warm Reel Seat, ergonomic design
- Super Sensitive System

### **Accessories:**

- Wire loop for hook keeping

# FISH POISON

## Spinning Rods

This light and ultra-light series has been developed using the latest technologies, materials and components. Ex-Fast action blanks combine power, excellent casting distance and high sensitivity. Due to use of high-modulus carbon HMN (46T), light but elastic blank is very effective while fighting a trophy fish giving it no chance to escape. Casting characteristics are also at a very high level. High modulus HNM carbon blank, cork handle, ergonomic FUJI “warm” reel seat, FUJI Alconite Mini Guides placed in accordance with KR-Guide System – you will get all these top characteristics at a very reasonable price! Ideal for fishing using small plastic lures, spinners, spoons, different light weight jigs and heavy flies.

### **Blank:**

- High modulus HNM carbon
- Ex-Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- FUJI ALCONITE guides
- Antitwisting Tip
- Tangle Free frame design
- Mini Guide System, maximum lightweight, single foot
- KR-Guide System

### **Handle:**

- Ergonomic design
- Material: cork

### **Reel Seat:**

- FUJI
- Warm Reel Seat, ergonomic design

### **Accessories:**

- Wire loop for hook keeping

## WARRIOR CASTING jerkbait Spinning Rods

This is a special casting rod for jerk fishing with medium and large jerk baits. Stiff Ex-Fast blank ensures the right jerking movement of a lure in the water and damps well even the largest fish jerks. Reinforced blank design together with rod construction "1+" (blank + handle) are not afraid of any extreme loads and have enormous power reserves.

### **Blank:**

- Material: carbon
- Ex-Fast Action
- 1+ section (blank + handle)
- Reinforced put-over joint (WXW-X)

### **Guides:**

- SIC guides
- Antitwisting Tip
- Low profile, reinforced, double foot
- N-Guide System

### **Handle:**

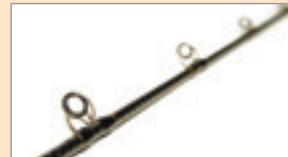

- Material: EVA (neoprene)

### **Reel Seat:**

- Baitcasting (with trigger) classic screw down design

### **Accessories:**

- Wire loop for hook keeping

Item No.	Material	Action	Length, cm	Transport Length, cm	Weight, g.	Guides	Sections	Test, g.

JBSD15H	High Modulus Graphite HMIE	Ex-Fast-Action	150	117	111	6	1+	20-80

## RANGER rockfish Spinning Rods

This is a series of Ex-Fast spinning rods for fishing with small jigging lures of UltraLight range. Super sensitive solid tip will feel even the most careful bite and provide an accurate cast of your favorite mini lure. The tip is painted white for better visual control of retrieve. The blank is made of high modulus HME carbon and equipped with FUJI Alconite guides placed in accordance with KR-Guide Concept. Special guides of Mini Guide System absorb the impact on the blank and increase its sensitivity. A comfortable split handle improves rod balance and the reel seat with Super Sensitive System option makes it more informative. Ranger is a wonderful rod for those who prefer a graceful fishing style with ultralight jigs, micro spoons or spinners.

### **Blank:**

- High modulus HME carbon
- Ex-Fast Action
- 2 sections
- Put-over joint
- Glued in solid tip

### **Guides:**

- FUJI ALCONITE guides
- Antitwisting Tip
- Tangle Free frame design
- Mini Guide System, maximum light weight, single foot
- KR-Guide System

### **Handle:**

## EGOIST-X Spinning Rods

The new restyle of the popular spinning rods Egoist-X will please all fans of fishing using ultralight gear. All rods of this series have very sensitive tip sections and Fast action blanks to guarantee excellent feedback and casting accuracy. Blanks are made of high modulus HME carbon and fitted with FUJI Alconite guides placed in accordance with KR-Guide System concept. A split handle design helps to reduce overall weight of the rod and at the same time increases its sensitivity and improves its balance. Sensitive tip allows to feel even the most careful bite. Whereas blank has a sufficient power margin to handle any hard jerks of large predators.

### **Blank:**

- High modulus HME carbon
- Fast Action
- 2 sections
- Put-over joint

### **Guides:**

- FUJI ALCONITE guides
- Antitwisting Tip
- Tangle Free frame design
- Micro-rings Mini Guide System, maximum lightweight, single foot
- KR-Guide System

### **Handle:**

## MARAUDER twitching Spinning Rods

This is a great spinning rod especially designed for those, whose favourite fishing style is twitching. We have paid great attention to every detail: ultra-light weight, Ex-Fast action, high modulus HMN+HME carbon (40T+46T combination), fantastic accessories, FUJI Mini Guide System. Only when all the above components are combined in one blank we can get an ideal rod for twitching. In this case we will feel every movement of a lure, the rod will play correctly and the tip will not “fall through” when using aggressive manner of twitching. On this series Tangle Free frames are used together with lightweight FUJI Alconite KR-Concept guides. Marauder spinning rods feature superb casting performance and ideal for quick retrieve when fish needs to be taken out from water immediately, so that not to give it any chance to dive under a snag or hide in vegetation.

### **Blank design:**

## EGOIST LE limited edition Spinning Rods

This is a new limited series of the popular spinning rods Egoist LE which raises the bar of rod building to a higher level. The blank is marked with Extra-Fast action in contrast to its namesake with marking “X”, which had Fast Action blanks. New series rods are fitted with FUJI SIC guides with Tangle Free frames. Guides are placed in accordance with modern K-Guide System concept. For this series producers have used a new type of FUJI reel seat which has absolutely the best sensitivity. Due to use of modern materials and high-quality rod components this series combines excellent casting performance and high sensitivity. Perfect balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and enjoy retrieving.

### **Blank:**

- High modulus HME carbon

## DREAMER-X Spinning Rods

Spinning rods of the renewed Dreamer-X series are an excellent combination of lightness, sensitivity and power. The Dreamer-X blank has a Sandwich construction - a combination of several high modulus carbon fiber materials in one blank. With the help of multiple layers, we managed to reinforce the middle and the butt sections without increasing the diameter of the blank. Whereas the tip remains flexible and sensitive which helps interpret the bottom contour and lets you have a full lure control regardless of fishing conditions. The blank is equipped with Mini Guide FUJI SIC guides placed in accordance with KR-Concept. X-Joint of rod sections (or spigot joint), ergonomic handle, reel seat with carbon resonator (Super Sensitive System) which provides greater sensitivity “in hand”, together with Ex-Fast action blank made of high modulus HMN+HME carbon – all these characteristics make Dreamer-X an incredibly informative fishing tackle. Powerful butt section gives an angler more confidence when fighting a really big fish.

## MIDORI Spinning Rods **NEW**

This is a series of exclusive hi-tech spinning rods specially designed for the most effective trout fishing. It consists of 3 versions: Midori Area Edition 60XUL (test: up to 4 g) which is good for catching pond trout and classified as Area Fishing; Midori Stream Edition 62SUL and 66UL (test: up to 5g and 6g respectively) – for fishing in rapid mountain streams, small medium-fast running rivers and brooks. All Midori rods are ideal for delicate fishing requiring “animation” of plastic lures, lightweight jigs, micro spoons and wire rigs. Midori blanks feature fast action, slightly more stiffness compared with classic Area and Stream rods and the shortest damping period (that is how rapidly a rod will damp out vibrations). All the other characteristics of an ultralight trout rod remained the same – long and accurate casting of lures in all the range of weights, the possibility “to animate” a lure, extraordinary sensitivity, perfect balance and ultralight weight. This rod is made of high modulus NANO carbon fibers reinforced with L.W.G. Wrapping Carbon for additional protection of the blank. It is equipped with premium Fuji components: super light and productive TORZITE guides in titanium frames, ergonomic reel seat and high quality cork handle. Thanks to combination of NANO fibers, FUJI TORZITE guides, Super Sensitive System and Mini Guide System we managed to create surprisingly light weight rod (for example, the weight of 60XUL is only 58g) with incredible sensitivity and amazing power. The flexible blank perfectly works when playing a fish reducing hookpulls and line breakage to a minimum.

### **Blank:**

- High modulus carbon NANO GRAPHITE FIBERS
- Fast Action
- 2 sections
- Reinforced put-over joint (L.W.G.)

### **Guides:**

- FUJI TORZITE guides
- Titanium frames
- Antitwisting Tip
- Tangle Free frame design
- Micro-rings Mini Guide System, maximum lightweight, single foot
- KR-Guide System

### **Handle:**

- Ergonomic design, light weight split handle
- Material: cork

### **Reel Seat:**

- FUJI
- Warm Reel Seat, ergonomic design
- Super Sensitive System

Super Sensitive System

## RAPTOR-X professional series Spinning Rods

The updated Raptor-X is a modern multipurpose rod with an excellent combination of light weight, good sensitivity and ultimate power. All the modern technologies, the most advanced materials and components available today have been applied to the new Raptor-X. Its blank is made of NANO fibers and has a Sandwich construction - a combination of several high modulus carbon fiber materials in one blank. With the help of multiple layers, we managed to reinforce the middle and the butt sections without increasing the diameter of the blank. Whereas the tip remains flexible and sensitive which helps interpret the bottom contour and lets you have a full lure control regardless of fishing conditions. The blank is equipped with FUJI SIC Mini Guides in titanium frames, placed in accordance with KR-Guide Concept. X-Joint (or spigot joint) together with carbon fiber reinforced blank make this rod extremely powerful but light weighted. Ergonomic cork handle and “warm” reel seat with Super Sensitive System provide maximum sensitivity when holding it “in hand”. Responsive tip allows to feel even the most careful bite and powerful butt section gives an angler more confidence when fighting a really big fish.

### **Blank design:**

- Sandwich construction – a combination of various types of high modulus carbon in one blank

### **Blank:**

## DEEP HUNTER Sea boat rods

This is a rod specially designed for sea boat fishing or so called vertical jigging rod. This budget and lightweight fishing rod is made from a composite heavy-duty material. Blank is fitted with special guides in durable LRX frames designed to withstand extreme loads, and deep-seated Gold Cermet rings, perfectly protected against damages. Handle is made in accordance with Powered Grip Construction technology from durable fined-pored EVA. A special perforation is applied to the upper part of the handle making the grasp more comfortable. Powerful reel seat is made from solid aluminum alloy. Butt section has a gimbal for use with fight belt. This rod is ideal for rough boat fishing for trophy cod, catfish, pollack and halibut.

### **Blank:**

- Composite material
- 2 sections
- Put over power joint

### **Guides:**

- High quality Gold Cermet guides
- Antitwisting Tip
- Tangle Free design, durable LRX frames
- Reinforced, double foot

### **Handle:**

- Powered Grip Construction
- Carbon gimbal buttcap
- Material: EVA (neoprene)

### **Reel Seat:**

- Reinforced screw down design with two clamping nuts

### **Accessories:**

- Wire loop for hook keeping

## FJORD Sea boat rods

This is a rod specially designed for boat fishing with heavy jigs. Reliable lightweight rod is made from IMFI carbon. It is fitted with special guides in durable LC (Low Rider Guide) frames, designed for heavy loads. Handle is made in accordance with Powered Grip Construction technology from durable fined-pored EVA. A special perforation is applied to the upper part of the handle making the grasp more comfortable. Powerful reel seat is made from solid aluminum alloy with two clamping nuts for reliable reel fixation. Butt section has a special aluminum gimbal for use with fight belt. Powerful blank combined with X-Joint (spigot) are designed for extreme loads and have a huge margin of strength. This is an ideal choice for trophy cod, catfish and halibut fishing.

### **Blank:**

- Material: IMFI carbon
- 2 sections
- Put over power joint
- X-Joint (spigot) connection

### **Guides:**

- SIC guides
- Antitwisting Tip
- Tough durable top design with enlarged improved profile rings
- Durable Tangle Free frame LC
- Reinforced, double foot

### **Handle:**

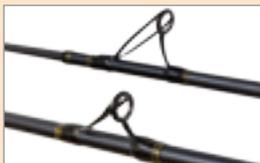

- Powered Grip Construction
- Aluminum gimbal buttcap
- Material: EVA (neoprene)

### **Reel Seat:**

- Reinforced screw down design with two clamping nuts

### **Accessories:**

- Wire loop for hook keeping

MBRF210H		210	105	420	8	2	50	до 700

# SEA EMPIRE Sea boat rods

**NEW**

This sea rod is specially designed for catching trophy halibut, cod, ling or sea bass. Sea Empire rods are produced using the unique Multi Tip Concept the idea of which is that rods are supplied with two tips for different purposes: 1) Interline Tip (fishing line runs inside the blank) – for fishing at depths up to 100m. The blank becomes more powerful due to equal load distribution. 2) Tip with classic guides placement is ideal for fishing at depths greater than 100m where fast sinking of a lure is more important than power characteristics of a blank. Each rod of this series is supplied with two tips which makes it really universal in the very best sense of the word. You will be prepared for any situation that may arise. If you have lost or broken one tip, you can continue fishing using the second one. In fact, you will get two rods in one. Sea Empire blanks are made of IMS carbon featuring unique Power Carbon Construction providing ultimate strength which is so necessary to handle extreme load when fighting a trophy sized fish. Sea Empire rods are equipped with a quality aluminum gimbal buttcap, reliable aluminum reel seat with two clamp nuts, excellent SIC guides with modern stainless steel LC (Low Rider) frames and salt water protection. The handle is made using Powered Grip Construction technology of a durable fined-pored EVA (neoprene). A special perforation is applied to the upper part of the handle making the grasp more comfortable.

These rods are capable of more than we expect. The elastic tip absorbs jerks very well whereas the powerful butt section allows to fight a big halibut or cod.

Item No.	Material	Length, cm	Transport length, cm	Weight, g.	Guides	Sections	Test, Lb	Test, g.
MBRSE702MH	IMS Powered Carbon Construction	210	105	320/315	8/Interline	1+2Tips	30	до 500
MBRSE702H		210	105	325/320	8/Interline	1+2Tips	50	до 700

**Blank design:**

- Multi-Tip (two interchangeable tips)
- Interline Tip
- Standard Tip

**Blank:**

- Material: IMS carbon
- 2 sections + additional tip
- Reinforced put-over joint

**Guides:**

- SIC guides
- Antitwisting Tip
- Heavy Duty Tip Top with enlarged and improved profile of the insert
- Heavy Duty Tangle Free frame LC
- Reinforced, double foot
- Power Interline construction preventing line from overlapping

**Handle:**

- Powered Grip Construction
- Aluminum gimbal buttcap
- Material: EVA (neoprene)

**Reel Seat:**

- Reinforced aluminum screw down design with two clamping nuts

**Accessories:**

- Special cable for running the fishing line inside the Interline blank

# SORCERER - POLE Float rods

This light but powerful Tele Pole is made of IMF carbon and has a Medium-Fast action blank. Rods of this series can be recommended for those who prefer to have a fishing tackle without guides and ideally suited for fishing with a bobber. The handle has a special non-slip coating. At the end of the handle you can find an unscrewed butt cap which lets you dry the rod.

## Blank:

- Material: IMF carbon
- Medium-Fast Action
- Telescopic construction

## Handle:

\*Transport length in the table does not include guides' protective cap. In order to get the total length including protective cap, add 3 cm to the figures shown in the table.

## WITCHER - BOLOGNESE Float rods

This is a high quality light and strong rod with Fast action stiff blank made of IMS carbon. Rods of this series are fitted with lightweight high foot SIC guides produced in South Korea. Thanks to them the line never sticks to the blank. Due to its light weight and ideal balance an angler would never get tired during a long fishing period. And the optimal construction of a blank allows to make very accurate casts, control retrieve of a big fish and minimize the number of hookpulls or false strikes. It is suitable for all types of float fishing. It comes with a special cap for safe storage and protection of the guides during transportation. At the end of the handle you can find an unscrewed butt cap which lets you dry the rod.

### **Blank:**

- Material: IMF carbon
- Fast Action
- Telescopic construction

### **Guides:**

- SIC guides
- Light weight, high single foot
- Two sliding guides on the tip

### **Handle:**

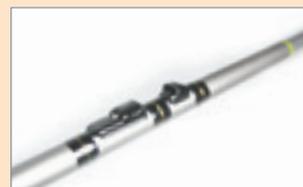

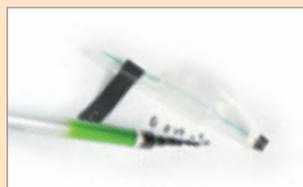

- Non-slip coating

### **Reel seat:**

- With movable lock

### **Accessories:**

- Protective cap

Item No.	Material	Action	Length, cm	Transport Length, cm	Weight, g.	Guides	Sections	Test, g.

\* Transport length in the table does not include guides' protective cap. In order to get the total length including protective cap, add 3 cm to the figures shown in the table.

## WALKER - TRAVEL

Float rods

This is a high quality short folded float rod will be very useful for keen travelers. The blank is made of IMS carbon, equipped with a reliable reel seat and light weight SIC guides produced in South Korea. The guides with the latest Tangle free frames help avoid any tangles and allow angler to concentrate completely on fishing. Proper placement of the guides ensures equal load distribution, desired casting distance and necessary power when fighting a fish. At the end of the handle you can find an unscrewed butt cap which lets you dry the rod.

### **Blank:**

- Material: IMS carbon
- Medium-Fast Action
- Telescopic multi-section 'Travel' design

### **Guides:**

- SIC guides
- Tangle free frame design
- Light weight, single foot
- One sliding guide on the tip

### **Handle:**

- Compact 'Travel' design

### **Reel seat:**

- With movable lock

### **Accessories:**

- Protective cap

Item No.	Material	Action	Length, cm	Transport Length, cm	Weight, g.	Guides	Sections	Test, g.

\* Transport length in the table does not include guides' protective cap. In order to get the total length including protective cap, add 3 cm to the figures shown in the table.

# MANTRA - MATCH

Float rods

This classic 3-section match rod is made of IMS carbon and has a Fast action blank. It is fitted with high foot SIC guides produced in South Korea. High frame guides for match rods, placed with a small interval, help to distribute the load equally and guarantee that the line will never stick to the blank. Thanks to the Fast action blank, an angler can make extra-long and very precise casts and react immediately to a fish bite. This is a great choice for match fishing in lakes as well as for trolling.

#### **Blank:**

- Material: IMS carbon
- Fast Action
- 3 sections
- Put-over joint

#### **Guides:**

- SIC guides
- Light high single foot guides for match rods
- Standard placement of the guides

#### **Handle:**

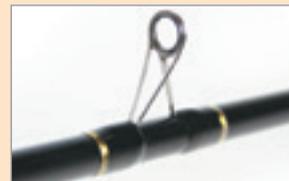

- Material: cork + EVE (neoprene)

#### **Reel Seat:**

- Classic screw down design

## MATRIX - MATCH Float rods

This is a float telescopic rod of a short folded length produced in accordance with Travel Design. This concept is based on the idea of minimal travel length of a rod. Matrix-Match series is specially designed for those who love travelling. Blank is made from high modulus HMH carbon. Rods of this series are fitted with lightweight high frame SIC guides, and thanks to them the line never adheres to the blank in rainy weather. Due to large number of rod sections, it became possible to place larger number of guides and shorten the distance between them. As a result, we have improved rod performance. Ideal balance and elaborate design of this model help an angler to make long distance casts and feel confident while fighting any fish regardless of its size. All rods are equipped with guides protection cap for safe transportation.

### **Blank:**

- High modulus HMH carbon
- Medium-Fast Action
- Telescopic multi-section 'Travel' design

### **Guides:**

- SIC guides
- Lightweight, single foot high frame guides + 1 reinforced double foot guide on the butt section
- 2 sliding guides: one on the tip, another on the second upper section

### **Handle:**

- Material: cork

### **Reel Seat:**

- Warm Reel Seat, ergonomic design
- With movable lock

### **Accessories:**

- Protective cap
- Wire loop for hook keeping

Item No.	Material	Action	Length, cm	Transport Length, cm	Weight, g.	Guides	Sections	Test, g.

# AGENT Feeder rods

**NEW**

This is a series of budget feeder rods with Medium-fast action blanks which will satisfy even the highest demands. Agent rods are available in a wide range of sizes allowing you to choose the right rod for any fishing conditions – whether you are fishing from the shore in still waters using a 10g feeder; or fishing in fast streams using a 120g feeder. This feeder rod is made of IMF carbon, equipped with SIC guides, a combined cork + EVA handle and a reliable classic reel seat. It is supplied with 3 tips of different stiffness. Its high quality carbon blank features enough stiffness and superb casting performance.

## **Blank:**

- Material: IMF carbon
- Medium-Fast Action
- 3 sections + 3 tips
- Put-over joint

## **Guides:**

- SIC guides
- Low profile reinforced guides (2 double foot, the others – single foot)

## **Handle:**

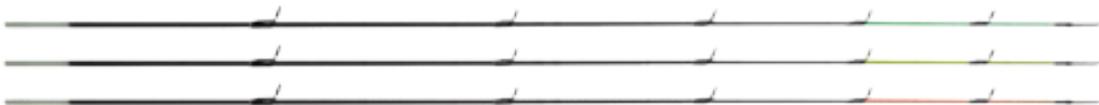

- Ergonomic design
- Material: cork + EVA (neoprene)

## **Reel Seat:**

- Classic screw down design

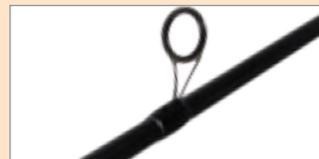

## **Accessories:**

- Three exchangeable tips

## MEDALIST - FLY Fly rods

This series is made of high modulus carbon at a South Korean factory which is specialized on fly fishing rods production. Medalist fly rods are equipped with classic “snake” guides, an elegant reel seat with an insert of precious wood, a classic shaped cork handle (Class 5,6 – Western Stile Grip, Class 7 – Full Wells Grip). Due to its light weight and Medium-Fast action, Medalist blank makes casting very comfortable and allows to present a fly very delicately. Supplied in a triangular tube. This is an ideal choice for anglers looking for a multipurpose fly rod.

### **Blank:**

- Material: high modulus carbon
- Medium-Fast Action
- 4 sections
- Put-over joint

### **Guides:**

- 2 inlet SIC guides
- The rest are classic “snake” guides

### **Handle:**

- Class 5, 6 – Western Stile Grip (Type No.1)
- Class 7 – Full Wells Grip (Type No.2)
- Ergonomic design
- Material: cork

### **Reel Seat:**

- Class 5,6 - screw down model with an insert of precious wood
- Class 7 – aluminum, screw down model

### **Accessories:**

- Wire loop for hook keeping
- Hard Cordura triangular tube
- Guiding marks for easy assembly (photo )
