HIGH MODULUS NANO GRAPHITE FIBER is an exclusive high modulus carbon fiber material with minimum content of binder and unidirectional carbon fiber structure, which provide graphite of maximum density. As a result, we get an extremely lightweight blank combined with maximum strength and sensitivity.

X-JOINT CONSTRUCTION is a special rods joint when two sections are connected with carbon tube insertion. This type of a joint doesn't change the action and bend of a blank, providing maximum reliability, sensitivity, functionality and casting characteristics specific for one-section rods.

SUPER SENSITIVE SYSTEM is a special reel seat constructed from vibration sensitive materials such as aluminum, carbon, which allows the anglers to feel every bottom touch, slight changes in lure action and the most delicate fish bites.

WARM REEL SEAT made from materials such as cork or EVA. Constructed for a warm feel in your hand and comfortable fishing especially in cold weather conditions.

NONSLIP COATING is a special coating which prevents angler's hand from sliding off the fishing blank. Handle is coated by antifriction granules that help to prevent sliding and improve grip control.

WXW-X-WRAPPING CARBON Blanks produced using the technology of X-Wrapping carbon fibers are more resistant to bending and twisting

HSS - HYPER SENSITIVE SYSTEM is the most up-to-date technology which allows the blank to use all its sensitive potential. Materials used for handle producing has high vibration sensitivity. The details made from this materials are put in blank construction. As a result anglers can get more information from bait.

SUPER SENSITIVE SYSTEM 2 The blank is designed in such a way that its upper part gently expands downwards and goes into the handle due to a special transition-cone. Thus, the blank and the handle of the rod are one unit that significantly reduces weight and adds sensitivity to a spinning construction. A reel seat mounted directly on the rod blank gives additional sensitivity to a spinning.

SST (SOFT SENSITIVE TIP) is a technology specially designed to increase rod sensitivity. Used for blanks with fast and extra fast action. Blanks based on SST technology are characterized by stiff middle and butt sections combined with soft responsive and flexible tips (about 1/3 of a blank). On retrieve the soft tip is always engaged, and after hitting the bottom it 'rebounds' immediately into the angler's hand letting him know about the touch of the bottom.

POWERED GRIP CONSTRUCTION The main idea of this construction is to ensure the perfect grip of a handle. It can be found on fishing rods designed to endure extreme loads, when it is important that handle will be reliably fixed in angler's hand.

MULTI-TIP CONCEPT Rods based on this concept are equipped with two tips for different purposes:

- 1st Interline Tip (fishingline runs inside the blank) – for fishing at depths up to 100m – a powerful blank construction due to equal load distribution.
- 2nd tip with classic rigging (LC guides frame) is ideal for fishing at depths of more than 100m where the quick sinking of a lure is more important than power characteristics of a blank. Each rod of this series is supplied with two tips. which makes it really universal in the very best sense of the word.

TRAVEL DESIGN Easily transported rods ideal for those who like travelling. It can be easily put into a standard suitcase or a travel bag.

TORZITE is a material used for internal guides surface producing. Helps to protect fishing line.

TITANIUM FUJI SIC Ultra light and durable guides in titanium frame with silicon carbide ring material (SIC). Titanium is much lighter and stronger than stainless steel.

AT-GUIDE Engineers have created a single leg guide, which has only 20% less strength than traditional two-leg guide. Specially designed for ultra light fishing rods.

ANTITWISTING TIP is a special "tang", designed to prevent line overlapping during casting. All line just slides from the tip because of the spherical stiffeners, thereby avoiding any damage to the rod or loss of a bait.

Fuji KOGYO CO LTD blanks fitted with Fuji guides.

Strong: Leg and ring frame has special profile to increase strength.
Lightweight: A new super thin ring insert. 35% lighter than a classic SIC inserts. The inner diameter increased by 15%.
Low Friction: Due to the shape of the ring insert the pressure on the ring is halved, which positively affects the casting distance.

MINI GUIDE SYSTEM is a modern concept using the smallest possible guides, micro guides you might say, helping to reduce the total weight of a rod. This technology is used only with KR-Guide Concept and 3D-Guide System.

TANGLE FREE Due to a special oval shape of the ring and an accurately calculated slope of the frame, tangles are completely eliminated.

SIC GUIDE Guides are fitted with silicon carbide made inlets. Increase casting distance up to 10% without any additional efforts. Suitable for both monofilament and braided lines.

ALCONITE Guides with perfectly smooth ceramic rings made of aluminum oxide. Help to increase casting distance and reduce friction by any braided line.

ZIRCONIA is a combination of a new type frame with heavy-duty zirconia rings makes “Kigan Zirconia” guides one of the best on the market. They feature extreme durability and fine granulation and exceed many types of ceramic rings.

GOLD CERMET Heavy-duty cermet coated with TiN. Besides hardness, perfectly smooth surface and durability, it has very low weight. TiN is a high-tech golden colour alloy featuring extreme toughness, optimum fine granulation and low weight.

KR-GUIDE CONCEPT (FUJI-JAPAN) is the main idea of this concept is to reduce resistance when braided line is flowing through the guides along the blank.

3D-ZH GUIDE SYSTEM (KIGAN-KOREA) New generation of guides introduced by Korean company ‘Kigan Industry Co., Ltd’ and placed in accordance with 3D-ZH Guide System.

K-GUIDE SYSTEM is a simplified version of KR-Guide Concept. Smaller guides allow lower weight and placed more frequently which contributes to perfect rod performance.

N-GUIDE SYSTEM is a special guide placement to allow maximum casting distance. It suggests more frequent placement of micro guides on high feet. This system helps to achieve better taper input, reducing resistance when braided line is passing through the guides and optimize maximum casting distance and accuracy.

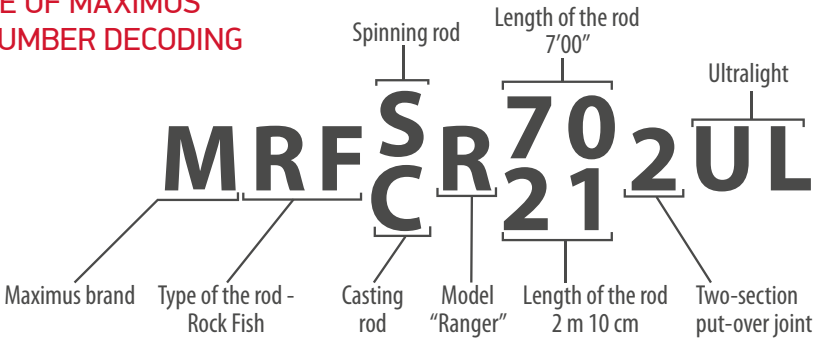

INTERLINE In accordance with Interline concept the fishing line runs inside the blank with the help of a system of many inner guides. Such constructive engineering solution provides ideal load distribution over the blank under maximum pressure which significantly increases the reliability of a tackle. Another distinct advantage of Interline concept is a complete lack of any line twisting which is especially important during sea fishing with pilker or other jigging lures. Interline rods become more and more popular for sea fishing because such construction has some undoubted advantages comparing with rods with standard guides. All Interline rods are equipped with a special cable for passing the fishing line inside the blank.

Butcher

This series of spinning rods combines low price with excellent assembly quality. Medium-fast blank is made of IMF carbon and fitted with SIC guides. Butcher was designed as a universal spinning rod and, as a result, anglers can fish using different techniques. It is perfect for fishing with jigs, spinners or plastic lures. In each situation it will demonstrate the best performance. The action of the rod is Medium-fast: being at rest, it is more like classic Fast action rod but in motion it functions like a Medium action one working throughout the whole length and able to manage all the jigs and leaps of a fish and minimize the amount of hook pulls. The split handle is made of dense fine-pored neoprene (EVA) and has a comfortable grip. The Warm Reel Seat provides maximum comfort in any weather conditions. Butcher is well balanced and perfect for catching different predator fish with various types of lures.

WINNER

This is a series of budget spinning rods with fast action blanks developed for fishing with different types of lures: wobblers, spinners, spoons and jigs. It's a great choice for those who need an inexpensive but multifunctional and quality spinning rod. Its blank is made of IMF carbon, equipped with lightweight SIC guides, ergonomic "warm" reel seat and functional high-quality EVA (neoprene) handle. Modern lightweight fast action blanks allow to make the most accurate casts and have great sensory characteristics. Powerful butt section copes perfectly with any big predator fish. Winner Spinning rods are superb for pike, zander, trout and perch fishing both on rivers and lakes.

Villain

Maximus Villain is a series of spinning rods that combine low price, high quality and modern technologies. Villian was designed as a universal spinning rod and, as a result, anglers can fish with it using different retrieval techniques. Villian is perfect for fishing with various jigs since it is a Fast action rod. K-Guide System was applied to this class of spinning rods for the first time. The blank is made of IMF graphite and equipped with SIC guides in Tangle Free frames. The split handle is made of thick microporous neoprene (EVA), it also features an attractive modern design and comfortable grip. The Warm Reel Seat provides maximum comfort in any weather conditions. This is a perfectly balanced spinning rod, which works well with different types of lures and is suitable for various kinds of predators.

AXIOM

In the design of the new spinning rods Axiom there were two main goals: to achieve a good price and to use the most up to date technologies, materials and accessories. Maximus engineers managed to do it. All rods are fitted with SIC guides in Tangle Free frames which help eliminate line tangles. They are placed in accordance with ultra-modern K-Guide System concept. Axiom blanks are made from IMF carbon, equipped with ergonomic EVA handle and comfortable Warm Reel Seat. Axiom series rods are considered truly versatile because they combine first class equipment with quite reasonable price, which make them extremely popular among all anglers.

ZIRCON

For the new Zircon spinning rods series, the same well-known blank construction was used as for the popular Axiom series. Engineers have made just a few small changes applying the more up-to-date “split handle” design and the rare black colour for the guiding ring frames. The Zircon spinning rod was designed as Fast action, all-purpose and intended for a wide group of anglers. Its blank is made of IMF carbon, fitted with light weight SIC guides and comfortable Warm Reel Seat made of dense fine-pored neoprene (EVA). The guides in Tangle Free frames are set up in accordance with the modern K- Guide Concept. The Maximus Zircon rods are available in a wide range of sizes so that you can find a suitable rod for any fishing situation. Due to its perfect balance, this model seems to be very light, but at the same time incredibly powerful to fight a big fish!

ZIRCON JIG

The main task of a jigging gear is to have an effective sensitivity. The special Zircon Jig series differs from the “universal” one: it has a different blank and a reel seat. It is designed according to classic principles of a jigging rod – blanks of this series are built more cone-shaped and the tip is much more elastic. Fitted with SSS (Super Sensitive System) reel seats for maximum sensitivity. The blanks are made of IMF carbon, equipped with lightweight SIC guides in Tangle Free frames, placed in accordance with K-Guide System. The reel seat deserves special attention. Thanks to its peculiar design, the angler’s fingers always contact directly with the rod blank, which partly provides an excellent sensitivity. The split handle ensures a comfortable grip. The rod shows excellent casting characteristics, which are so necessary when fishing along distant breaklines and slopes.

ZIRCON CASTING

Zircon Casting is a Fast Action casting rod, which allows anglers to make accurate and long-distant casts. The main difference between Zircon Casting and Zircon Spinning rods is that the casting version has a trigger reel seat featuring SSS (Super Sensitive System) and low profile guides. The guides are placed in accordance with K-Guide System, they have a slightly inclined Tangle Free frames and ceramic SIC inserts. The number of guides has been increased to meet the requirements of modern casting rods. The blank is made of IMF carbon. The split handle is made of microporous neoprene (EVA). Equipped with ergonomic Warm Reel Seat. Ideal balance and elaborate design of this rod help an angler make ultra-long casts, identify the bottom structure and feel confident while playing a fish.

Black Side TWITCHING

This is a budget Ex-Fast spinning rod. The main specialization of this rod is jerking lure retrieve or “twitching”. Comes in one length, but with 3 different casting weights. The blank is made of IMF carbon, equipped with SIC guides in Tangle Free frames, placed in accordance with K-Guide System. Covered thread Warm Reel Seat. The split handle is made of microporous neoprene (EVA). Due to its “stiff pole” construction, the spinning rod is commonly used for fishing in snags, weed beds and other difficult conditions. This model has a sufficient reserve of power that is required to play big fish.

POINTER ROCK FISH

Maximus Pointer (Rock Fish) is the junior model of the spinning rods, which are specialized in fishing with micro jigs. Its sensitive solid tip allows feeling the lightest bites and at the same time ensures effective casting of micro baits. The tip is painted in white colour for the best visual control. The blank is made of IMF carbon, equipped with SIC micro-guides in Tangle Free frames, placed in accordance with K-Guide System. The ergonomic split-grip handle reduces overall weight of the rod but increases its sensitivity and improves balance. It is made of dense microporous neoprene (EVA). The rod is equipped with the reliable Warm Reel Seat (IPS). Ex-Fast lightweight blank in combination with the monolithic «insert» provides maximum feedback when fishing with micro baits. Pointer is a budget, perfectly balanced spinning rod. It’s a great option for those who prefer delicate fishing with micro baits.

Workhorse-X

Extremely popular Work Horse spinning rods have been restyled but saved perfect value for money. Rods of the renewed series are fitted with SIC guides in Tangle Free frames which help avoid tangles. The guides are placed in accordance with ultra-modern K-Guide System concept. The blank is made of IMF carbon equipped with ergonomic EVA (neoprene) handle and reliable classic reel seat. Work Horse-X rods are really versatile because they combine high quality equipment and good value for money which make them extremely popular among all anglers. Due to properly built Fast action blank, these rods are very powerful but surprisingly light weighted. Elastic tip provides ultimate feedback when fishing with lures of entire test range. Powerful butt section can perfectly handle any big fish.

BLANK

- Material: IMF carbon
- Fast Action
- 2 sections
- Put-over joint

REEL SEAT

- Classic screw down design

Workhorse-X CORK

In 2017 Maximus announced the launch of a limited series of extremely popular Work Horse-X spinning rods with cork handle in a smaller size range. All rods are fitted with SIC guides in Tangle Free frames which help eliminate line tangles. The guides are placed in accordance with ultra-modern K-Guide System concept. The blank is made of IMF carbon equipped with ergonomic cork handle and reliable classic reel seat. Work Horse-X rods are considered truly versatile because they combine first class equipment with quite reasonable price, which make them extremely popular among all anglers. Due to their proper Fast action blanks, these rods have a great power but they are surprisingly light. Elastic tip provides ultimate feedback when fishing with lures of entire test range. Powerful butt section can perfectly handle any big fish.

Ichiro

The new budget series of Ichiro rods will please all fans of fishing with ultralight gear. All rods of this series have very sensitive tips and Medium-Fast action blanks to guarantee excellent feedback and casting accuracy. The blanks are made of high quality IMF carbon and fitted with ultralight AT-GUIDES, placed in accordance with K-Guide System concept. The split handle design helps to reduce overall weight of the rod, at the same time increases its sensitivity, and improves balance. The sensitive tip allows feeling even the most careful bite and the blank has a sufficient margin of power to handle any hard jerks of a large predator. Perfect balance and considered design help an angler to make very accurate casts, 'read' the bottom relief and enjoy retrieving.

WILD POWER-X

This is an updated series. Well known spinning rods have been restyled, but kept perfect value for money. Rods of new series are fitted with SIC guides in Tangle Free frames which help to eliminate tangles. They are placed in accordance with ultra-modern K-Guide System concept. Handle and reel seat have also been seriously changed. Now handle is made from two-coloured durable fine-pored neoprene (EVA) and a special ‘warm’ reel seat is used for better tactile comfort. Handle design makes it possible to use two types of grip: first – classic, second – sport, when a forefinger is put directly on the blank thereby increasing its sensitive characteristics. Wild Power-X rods are really versatile, because they combine high level of equipment and quite reasonable price which make them extremely popular among all anglers.

Emissary

For this new series of spinning rods we used the well-proven blank initially designed for the Ichiro series. Our experts have increased the range of sizes, applied an unusual camouflage design and a split-grip handle, they also used different types of guides for different models. The Ultralight and light models have been equipped with lightweight AT guides, whereas medium and medium light – with more powerful K-Series guides.

These all-purpose medium-fast rods are designed for a wide variety of anglers. Its blank is made of IMF graphite, fitted with comfortable Warm Reel Seat made of dense fine-pored neoprene (EVA). The guides are placed in accordance with the modern K- Guide System. Due to its perfect balance, this rod seems to be very light, but at the same time incredibly powerful to fight any big fish!

STEALTH-Z TWITCHING

Stealth-Z is a telescopic rod that features a compact folding design and retains all the benefits of a put-over rod. This rod can come in very handy if you are an avid traveler. IMS graphite blank, SSS (Super Sensitive System) reel seat, K-guides with Tangle Free frame - all these improvements have been applied to the new model. The Stealth-Z spinning rods are fitted with premium quality SIC guides placed in accordance with K-Guide System. Good value for money and compact folding design make them the best choice among the similar rods offered on the market.

ANVIL

This is a series of rods specially designed for twitching. These Ex-Fast rods can animate even the most «stubborn» lures. The blank is made of IMF carbon, equipped with SIC micro-guides in Tangle Free frames, placed in accordance with K-Guide Concept. Anvil is equipped with a unique reel seat, in which the base of the frame and the fixing nut are made as a single unit and do not have any protrusions or rims. This is very comfortable for the angler's hand, especially for extended periods of fishing. Covered thread Warm Reel Seat. The split handle is made of high quality microporous neoprene (EVA). It reduces overall weight of the rod but increases its sensitivity and improves balance. Elaborate design and great balance of this rod allow the anglers to make accurate casts and feel confident using a «twitch» retrieve effectively.

STREETRACER STREET FISHING

Over the last few years, fishing on the city embankments with ultralight lures is becoming more and more popular. Inspired by this idea, we have developed a series of spinning rods called Streetracer. This unique multi-purpose series of light and ultra-light spinning rods was specially designed for “mobile” fishing in the city area. The basic concepts of Streetracer were compactness and narrow specialization. All the rods of this type have 3-section blanks, which are very important when the rods are being transported in overcrowded city transport. Streetracer series includes four models of spinning rods, which would be of great demand at any of the fishing spots in the city area:

Nano Jig – Medium action spinning rod for fishing with ultra-light micro-jigs weighing up to 3.5 g.

Twitching – Fast action twitching spinning rod for fishing with lures weighing up to 12 g.

Ultra Light – Medium-Fast action spinning rod of Ultra light class for fishing with lures up to 7 g.

Light – Medium-Fast action spinning rod of Light class, for fishing with lures up to 10 g.

The blank is made of IMF carbon, equipped with SIC micro-rings (AT-GUIDE), placed in accordance with modern K-Guide Concept. All the rods of this series have a split handle and Warm Reel Seat. No matter what type of fishing you prefer – “Rock Fish” or “Nano Jig”, “Twitching” or “Ultralight” - in the Streetracer range you will find all the required models. This is an elaborate series of rods, which allows an effortless lure control and lets the angler feel the lightest of bites.

STREETRACER ROCK FISH

Over the last few years, fishing on the city embankments with ultralight lures is becoming more and more popular. Inspired by this idea, we have developed a series of spinning rods called Streetracer. This unique multi-purpose series of light and ultra-light spinning rods was specially designed for “mobile” fishing in the city area. The basic concepts of Streetracer were compactness and narrow specialization. All the rods of this type have 3-section blanks, which are very important when the rods are being transported in overcrowded city transport.

In addition to the models listed above, the series includes one more item:

Rock Fish – Medium-Fast spinning rods with special glued-in tips for the best control of ultra-light jig baits weighing 5g, 6g or 7g. The blank is made of IMF carbon, equipped with SIC micro-rings (AT-GUIDE), placed in accordance with modern K-Guide Concept. All the rods of this series have a split handle and Warm Reel Seat. No matter what type of fishing you prefer – “Rock Fish” or “Nano Jig”, “Twitching” or “Ultralight” - in the Streetracer range you will find all the required models. This is an elaborate series of rods, which allows an effortless lure control and lets the angler feel the lightest of bites.

Neon Spy

This new series of spinning rods was based on the popular Wild Power-X blank. All rods of this series feature bright, creative design and excellent hi-tech equipment. The rods are fitted with SIC guides in Tangle Free frames which help eliminate tangles. They are placed in accordance with ultra-modern K-Guide System concept. The split handle is made from dense fine-pored neoprene (EVA); and a special ‘warm’ reel seat is used in this series for better tactile comfort. Such handle design makes it possible to use two types of grip: “classic” and “sports”, when a forefinger is put directly on the blank thereby increasing its sensitivity. High quality equipment of Neon Spy rods at a quite reasonable price make them extremely popular among all anglers.

ADVISOR JIG

This rod was specially designed for jig fishing. It has a number of characteristics well suited for this fishing method: an Ex-Fast action blank, an elastic tip, lightweight and effective guides, and a reel seat featuring increased sensitivity. All these features provide an incredible sensitivity and maximum comfort during jig fishing. The choice of length and test of the rod usually depends on fishing conditions. The Advisor range is wide enough to find a rod, which would meet your requirements. The blank is made of IMF carbon, equipped with SIC guides in Tangle Free frames, placed in accordance with K-Guide Concept. Tangle Free frames solve the problem of braided line tangles, which is very important when casting small jigging lures. The ergonomic split-grip handle reduces overall weight of the rod but increases its sensitivity and improves balance. Despite its narrow specialization, this rod can be perfectly used for other types of fishing, such as fishing with spoons and spinners. Short rods can be applied for “twitching”. Thanks to its Ex-Fast blank, Advisor can easily “twitch” even the hard-pulling lures.

High Energy-Z

The main task in creating the updated series High Energy-Z was to bring it to a new technological level, and the engineers obviously succeeded in it. Being made of the same material as the previous generation, the new rod turned out on average 12% lighter, whereas the thickness of the blank remained the same. The engineers decided not to paint the blank, they used lighter and smaller guides and equipped the rod with a split handle. As a result, they have achieved some weight reduction and more accurate blank performance. The residual oscillations after casting have practically disappeared. Now the blank recovers instantly, its action becomes more "fast". The blank is made of high modulus HME carbon fitted with K-frame SIC guides placed in accordance with the advanced K-Guide System, and equipped with the unique reel seat. We would like to draw your attention to the latter component, because its design is unique. All the details were made streamlined and have no protrusions or sharp edges, which is extremely convenient for anglers' hands. The split-grip handle is made of dense fine-pored neoprene (EVA). The High Energy-Z spinning rod is capable of performing many different tasks and copes with them very successfully.

High Energy-Z JIG

This is a specialized jigging rod which was designed with the help of professional anglers who took into account all the aspects of "heavy-jig" fishing. The High Energy-Z Jig series looks almost the same as the universal High Energy-Z series but their guides, reel seats and the tapers of the rods are completely different. This spinning rod is perfectly balanced and has the maximum set of options for jig fishing. It features Ex-Fast action, lightweight high-performance guides, HSS reel seat (Hyper Sensitive System). The blank is made of high modulus graphite HME, the butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. After casting, the oscillations get dumped effectively, the blank recovers almost instantly, which results in excellent casting quality. The rod is equipped with the Korea T-Zirconia Slim Guides with ultra-thin zirconia inserts, placed in accordance with K-Guide Concept. The essential features of the reel seat are 2 clumping nuts - one nut tightens the other and doesn't allow the reel to get loose when fishing with heavy jigs. The split-grip handle is made of dense fine-pored neoprene (EVA). Thanks to its accurate Ex-Fast blank, the rod doesn't "fall through" when using aggressive jigging methods and allows to hook the fish reliably.

BLANK

- Material: High modulus HME graphite
- Ex-Fast Action
- SST (Soft Sensitive Tip) - technology used to increase the sensitivity of the blank

REEL SEAT

- Warm Reel Seat
- Ergonomic design
- Super Sensitive System

GUIDES

- KOREA GUIDES with zirconia inserts (Zirconia)
- K-Guide frame
- T-ZIRCONIA SLIM RING
- Antitwisting Tip
- Tangle Free construction
- Lightweight, single foot
- K-Guide System

HANDLE

- Ergonomic design
- Lightweight split grip handle
- Material: EVA

ENCORE

This is a new series of spinning rods with unique design. They are based on the popular High Energy-X blanks. Use of modern materials and unique technologies allowed creating of a well-balanced spinning rod. Blank is made from high modulus HME carbon. Encore rods are equipped with hi-tech reel seat featuring Super Sensitive System with ratchet and guides with up-to-date Tangle Free frames helping to eliminate all possible line tangles. New series rods have SIC guides produced in South Korea which are placed in accordance with advanced K-Guide System concept. Fast action blank is very powerful and light weighted. Elastic tip provides maximum feedback when fishing with lures of entire test range. Powerful butt section can perfectly handle any big fish.

Legend Ultras

The new Legend Ultras series by Maximus will please all fans of fishing with ultralight gear. All rods in this series have very sensitive tips and Fast action blanks to guarantee excellent feedback and casting accuracy. The blanks are made from high modulus IMSE carbon and fitted with ultralight AT-GUIDES, placed in accordance with K-Guide System concept. The split handle helps to reduce overall weight of the rod, at the same time increases its sensitivity and improves balance. Ergonomic handle, Warm Reel Seat with carbon resonator (Super Sensitive System) which provides greater sensitivity “in hand”, together with Fast action blank – all these features make Legend Ultras rod extremely popular among all anglers.

GRAVITY JIG

This is a series of Ex-Fast Action rods, specially designed for jig fishing. All the elements were created to achieve maximum sensitivity, when animating jig baits, effective “reading” of the bottom features and detecting of fish bites. The blank is made of high-modulus HME carbon reinforced by using special technology (Xwxw) to increase strength and torsion resistance. Gravity rods come with ultralight and durable T-Zirconia Slim Guides with ultrafine innovative Zirconium ring inserts. Effective modern guides in combination with the ergonomic «skeletal» TVS reel seat provide excellent sensitivity, comfortable and reliable grip. The ergonomic split-grip handle reduces overall weight of the rod but increases its sensitivity and improves balance. Elastic tip (SST technology) provides maximum responsiveness, when fishing with lures of any casting weight, whereas powerful butt section gives an angler more confidence when fighting a big fish.

BLACK WIDOW

KIGAN

MINI GUIDE SYSTEM

Black Widow is an ideal choice for those who are looking for a universal high-tech rod at a reasonable price. This is a successful attempt to combine a high-quality blank and a good value for money. Fast action, medium stiffness and high modulus IMSE carbon allow using it for jigging and twitching, as well as for fishing with spinners, spoons and wobblers. High quality Kigan Zirconia guides placed in accordance with modern 3D-Guide and Mini Guide Systems are supplemented with classic FUJI reel seat and “warm” neoprene handle. Excellent sensitivity, long casting distance and comfortable retrieve make this rod useful for catching different fish using various techniques.

SMUGGLER TRAVEL

This is a great choice for those who need a compact hi-tech spinning rod for travelling. It is sometimes expensive and not comfortable to travel by plane or train with an additional baggage piece. So we have launched a fully-featured compact spinning rod with put-over connection. It is based on the very popular blank of High Energy-X series produced in accordance with the Travel concept in 4 sections. New series rods have SIC guides with Tangle Free frames helping to prevent any line tangles. Guides are placed in accordance with ultra-modern K-Guide System concept. Handle is made from durable fine-pored EVA. Smuggler rods are equipped with the most comfortable “warm” reel seat. Due to use of modern materials and high-quality rod components this series combines excellent casting performance, high sensitivity, a large amount of power and what is more important – incredibly compact transport length!

MANIC TWITCHING

This is an Ex-Fast action spinning rod specially designed for twitching but also can be used for fishing in snags or underwater vegetation and jig fishing. Thanks to Ex-Fast Action blank, spinning rod has an incredible margin of power necessary when fighting with a fish on forced retrieve, fishing in snags and in other difficult situations. Blank is made from high modulus HME carbon, equipped with “warm reel” seat featuring Super Sensitive System technology. Manic rods are fitted with SIC guides with Tangle Free frames helping to prevent any line tangles. Guides are placed in accordance with modern K-Guide System concept. Ideal balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and feel confident while retrieving any fish regardless of its size.

FISH POISON

This light and ultra-light series has been developed using the latest technologies, materials and components. Ex-Fast action blanks combine power, excellent casting distance and high sensitivity. Due to use of high-modulus carbon HMN (46T), light but elastic blank is very effective while fighting a trophy fish giving it no chance to escape. Casting characteristics are also at a very high level. High modulus HNM carbon blank, cork handle, ergonomic FUJI “warm” reel seat, FUJI Alconite Mini Guides placed in accordance with KR-Guide System – you will get all these top characteristics at a very reasonable price! Ideal for fishing using small plastic lures, spinners, different light weight jigs and heavy flies.

Mescalito JIG LE

Model is produced in a limited edition. This specialized jigging rod has been developed with the help of professional anglers for the most comfortable and successful fishing experience. Mescalito is a lightweight, comfortable and extremely sensitive rod for fishing with all types of jigs. Thanks to its accurate Ex-Fast blank, the rod doesn’t “fall through” when using aggressive jigging methods and allows to hook the fish reliably. The spinning rod is perfectly balanced and designed for professional jigging. It features Ex-Fast action, lightweight high-performance guides, HSS reel seat (Hyper Sensitive System).

The blank is made of high modulus graphite HME, the butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. After casting, the oscillations get dumped effectively, the blank recovers almost instantly, which results in excellent casting quality. The rod is equipped with the Korea T-Zirconia Slim Guides with ultra-thin zirconia inserts, placed in accordance with K-Guide Concept. The number of the guides and their diameters have been increased compared to the standard models. The increased number of the guides ensures an ideal load distribution throughout the length of the rod. This makes for better performance of the rod during casts and retrieves. The increased diameters of the guides on the rod make it more comfortable to use in cold temperatures. The handle is designed to achieve comfortable grip and maximum sensitivity.

BLANK

WARRIOR CASTING JERKBAIT

This is a special casting rod for jerk fishing with medium and large jerk baits. Stiff Ex-Fast blank ensures the right jerking movement of a lure in the water and damps well even the largest fish jerks. Reinforced blank design together with rod construction «1+» (blank + handle) are not afraid of any extreme loads and have enormous power reserves.

Neon Midori TROUT

This is a series of hi-tech spinning rods specially designed for the most effective trout fishing. It consists of four models: Neon Midori Area Edition 602XUL (test: up to 4 g) suitable for pond trout and classified as “Area Fishing”; Neon Midori Stream Edition 622SUL (test: up to 5g), 662UL and 702UL (test: up to 6g) suitable for fishing in rapid mountain streams, small medium-fast running rivers and brooks. All Midori rods are perfect for delicate fishing style requiring “animation” of plastic lures, lightweight jigs, micro spoons or wire rigs. Midori blanks feature medium-fast action, slightly more stiffness compared with classic Area and Stream rods and the shortest damping period (that is how rapidly a rod will damp out vibrations). All the other characteristics of our ultralight trout rod remained the same – long and accurate casting of lures of any size or weight, the possibility to use various “animation” techniques, superb sensitivity, perfect balance and ultralight weight. This rod is manufactured from high modulus NANO carbon fibers. It is built with premium modern components: ultra-light guides Korea T-Zirconia Slim Rings in super light frames with ultra slim Zirconia inserts and ergonomic Fuji skeleton TVS reel seats. Due to the unique combination of NANO fibers, Korea T- Zirconia Slim Ring, Super Sensitive System and Mini Guide System we managed to create an exceptionally lightweight rod with incredible sensitivity and amazing power. This flexible blank can minimize hookpulls and line breakage giving you the best fishing experience you have ever had!

Destroyer-X CASTING JERKBAIT

Updated Destroyer-X series by Maximus will please all fans of fishing with medium and large jerk baits. Rods of the renewed series are fitted with modern SIC guides in Tangle Free frames which help eliminate line tangles. Now you do not need to worry about such situations when fishing line can tangle and “shoot off”, or even the rod can break. It is absolutely impossible when using Tangle Free frame design. Guides are placed in accordance with K-Guide System concept. The reel seat has also undergone a number of changes. In its design we have added a carbon resonator (Super Sensitive System) for greater sensitivity. The high quality blanks are made from high modulus HME carbon. The split handle helps reduce overall weight of the rod, at the same time increases its sensitivity and improves balance. Blank construction “1+” (blank + handle) has enormous reserves of power to handle any large predator’s jerks.

BLANK

- High modulus HME carbon

RANGER ROCKFISH

This is a series of Ex-Fast spinning rods for fishing with small jigging lures of UltraLight range. Super sensitive solid tip will feel even the most careful bite and provide an accurate cast of your favorite mini lure. The tip is painted white for better visual control of retrieve. The blank is made of high modulus HME carbon and equipped with FUJI Alconite guides placed in accordance with KR-Guide Concept. Special guides of Mini Guide System absorb the impact on the blank and increase its sensitivity. A comfortable split handle improves rod balance and the real seat with Super Sensitive System option makes it more informative. Ranger is a wonderful rod for those who prefer a graceful fishing style with ultralight jigs, micro spoons or spinners.

Egoist LE

This is a new limited series of the popular spinning rods Egoist LE which raises the bar of rod building to a higher level. The blank is marked with Extra-Fast action in contrast to its namesake with marking "X", which had Fast Action blanks. New series rods are fitted with FUJI SIC guides with Tangle Free frames. Guides are placed in accordance with modern K-Guide System concept. For this series producers have used a new type of FUJI reel seat which has absolutely the best sensitivity. Due to use of modern materials and high-quality rod components this series combines excellent casting performance and high sensitivity. Perfect balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and enjoy retrieving.

Egoist-Z

NOTHING'S PERFECT, EXCEPT ME!

The newly redesigned series of the popular spinning rods Egoist will please all fans of fishing with ultralight gear. Due to the use of modern materials and high quality components, it became possible to create an incredibly responsive fishing rod for long casting. A number of technical changes have been made including modification of guides. On our spinning rod marked with prefix Z, we have used the lightest guides in AT frames made in South Korea. The elaborate design of the inserts allows using all types of modern fishing lines: fluorocarbon, polyester, nylon, and, of course, all types of braided lines. The blank is made of high modulus HME graphite and fitted with extra-light Korea T-Zirconia Slim Ring with ultra-thin zirconia inserts. The ultra lightweight guides in combination with the ergonomic «skeleton» TVS reel seat provide an excellent balance of the rod and a comfortable and reliable grip. The split handle design helps to reduce overall weight of the rod and at the same time increases its sensitivity.

Marauder X TWITCHING

Our great twitching rod got a new design. The changes mainly affected the ergonomics of the handle; our engineers modified it to have a more complete look. The Marauder-X Twitching rod was specially designed for jerking retrieve technique and every detail was thoroughly developed: ultra-light, Ex-Fast action blank, made of high modulus HMN + HME graphite (40 + 46T combination). The butt section reinforced with special carbon fibers to increase rigidity and resistance to twisting. FUJI guides with Alconite inserts, placed in accordance with modern KR-Guide Concept. Only when all the above components were combined we were able to build an ideal rod for twitching. This rod will allow anglers to feel every movement of a lure, it will work precisely and the tip will not «fall through» when using an aggressive twitching technique.

Pulse ROCKFISH

Pulse is a rockfish spinning rod designed for catching on medium and short distances using micro-baits requiring precise animation. In the spinning of this series, a number of unique technologies were tested and applied: Super Sensitive System2, new rings T-Zirconia Slim Ring, Stiff High Modulus Graphite Thin Solid Tip. Let's talk about these technologies: Super Sensitive System2 - the blank is designed in such a way that its upper part gently expands downwards and goes into the handle due to a special transition-cone. Thus, the blank and the handle of the rod are one unit that significantly reduces weight and adds sensitivity to a spinning construction. A reel seat FUJI SKSS is mounted directly on the rod blank and it gives additional sensitivity to a spinning construction too. The tests of these rods proved their consistency. Spinning has an unsurpassed sensitivity, weighing only 78 grams at a length of 2.22 meters. T-Zirconia Slim Ring - super light and productive rings Korea T-Zirconia Slim Ring in superlight frame with a new ultrathin zirconia insert. These rings are about 35% lighter than the classic ones with the SIC insert. Modern super light rings are a necessary attribute for ultra light class fishing rods for maximum sensitivity increase and instant recovery of the form. Stiff High Modulus Graphite Thin Solid Tip - the superfine rigid monolithic top (insert) made of high-modulus graphite. Allows you to make accented animation of the lightest jigs and provides incredible sensitivity. Bandages of the spinning top rings are painted in orange for better visual control of the wiring. The combination of NANO fibers, Korea T-Zirconia Slim Ring in AT-Guide frames and Super Sensitive System2 and Mini Guide System technologies let us create an unusually light spinning rod with incredible sensitivity and power reserve.

DREAMER-Z LE

Dreams Come True

The limited series of spinning rods Dreamer-Z belongs to the premium class rods and is associated with technological progress. They are exclusively assembled with premium FUJI accessories: for lightweight models we used FUJI TITANIUM SIC – AT guides, for medium-weight – more powerful FUJI TITANIUM SIC – K-series guides, placed in accordance with KR-GUIDE CONCEPT. The reel seat: FUJI-VSS, X-JOINT (Spigot joint) construction. The blank is made of high modulus HMN graphite, its butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. Thanks to the use of high-modulus carbon fiber composites, we managed to build a slim blank that has a minimal diameter in its butt section and at the same time features Ex-Fast action. Our «Dreamer» comes fitted with the latest HSS construction (Hyper Sensitive System) with excellent sensitivity. The spinning rods of this series have the perfect combination of light weight, sensitivity and power.

Midori TROUT

This is a series of exclusive hi-tech spinning rods specially designed for the most effective trout fishing. It consists of 3 versions: Midori Area Edition 60XUL (test: up to 4 g) which is good for catching pond trout and classified as Area Fishing; Midori Stream Edition 62SUL and 66UL (test: up to 5g and 6g respectively) – for fishing in rapid mountain streams, small medium-fast running rivers and brooks. All Midori rods are ideal for delicate fishing requiring “animation” of plastic lures, lightweight jigs, micro spoons and wire rigs. Midori blanks feature fast action, slightly more stiffness compared with classic Area and Stream rods and the shortest damping period (that is how rapidly a rod will damp out vibrations). All the other characteristics of an ultralight trout rod remained the same – long and accurate casting of lures in all the range of weights, the possibility “to animate” a lure, extraordinary sensitivity, perfect balance and ultralight weight. This rod is made of high modulus NANO carbon fibers reinforced with L.W.G. Wrapping Carbon for additional protection of the blank. It is equipped with premium Fuji components: super light and productive TORZITE guides in titanium frames, ergonomic reel seat and high quality cork handle. Thanks to combination of NANO fibers, FUJI TORZITE guides, Super Sensitive System and Mini Guide System we managed to create surprisingly light weight rod (for example, the weight of 60XUL is only 58g) with incredible sensitivity and amazing power. The flexible blank perfectly works when playing a fish reducing hookpulls and line breakage to a minimum.

Raptor-z

Enjoy Every Moment

The redesigned series Raptor-Z has undergone a number of serious technical changes, and now is associated with technological progress. This top series of Maximus spinning rods is exclusively equipped with premium FUJI accessories: for lightweight models we used FUJI TITANIUM TORZITE-K guides, for medium-weight – more powerful FUJI TITANIUM TORZITE-K guides, placed in accordance with KR-GUIDE CONCEPT. The reel seat: «Skeleton» FUJI-TVS, X-JOINT, or Spigot joint of rod sections. The blank is made of high modulus NANO GRAPHITE FIBER, its butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. Features EX-Fast action. Thanks to the use of ultra-modern materials, we managed to create the blank with the smallest possible diameter. The new «Raptor» features an incredible sensitivity due to the modified technology HSS (Hyper Sensitive System). The company managed to apply the most advanced technologies and modern materials to this model.

BOUNCER TROLLING

This is a series of rods specially designed for trolling. This unique rod is unmatched in its class. Its blank is made of high-quality composite blend and features a J-Action, typical for trolling rods. The Bouncer is equipped with anti-twisting guides featuring high corrosion resistance. The guides are placed in such a way that energy and stress are evenly spread throughout the length of the rod, preventing the line from sticking to the blank under the heaviest load. The sensitive brightly coloured tip made by using Power Stick technology allows an angler to feel the action of a lure at the end of the line and accurately detect any fish bites. A special coating of the tip makes it easy to notice a fish bite even at twilight. These rods are equipped with classic screw-down reel seats and comfortable EVA handles. Bouncer is a reliable trolling rod that can be used both for fishing in freshwater and in the sea. It is suitable for anglers of all skill levels.

JAZZ TROLLING

This is a professional series of trolling rods. The blank is made of high-quality composite blend and features a J-Action, typical for trolling rods. We applied the Heavy Duty Guide Concept to our new JAZZ rods: we equipped them with powerful anti-twisting guides featuring high corrosion resistance. The guides are placed in such a way that energy and stress are evenly spread throughout the length of the rod, preventing the line from sticking to the blank under the heaviest load. The sensitive brightly coloured tip made by using Power Stick technology allows an angler to feel the action of a lure at the end of the line and accurately detect any fish bites. A special coating of the tip makes it easy to notice a fish bite even at twilight. The rod has a gimbal with a protective removable butt cap, the powerful anodized aluminum reel seat and the comfortable high-quality EVA foam grip with a non-slip coating. JAZZ is a professional trolling rod specially designed for experts in trolling, which can be used both in freshwater and in the sea.

FJORD BOAT

This is a rod specially designed for boat fishing with heavy jigs. Reliable lightweight rod is made from IMFI carbon. It is fitted with special guides in durable LC (Low Rider Guide) frames, designed for heavy loads. Handle is made in accordance with Powered Grip Construction technology from durable fined-pored EVA. A special perforation is applied to the upper part of the handle making the grasp more comfortable. Powerful reel seat is made from solid aluminum alloy with two clamping nuts for reliable reel fixation. Butt section has a special aluminum gimbal for use with fight belt. Powerful blank combined with X-Joint (spigot) are designed for extreme loads and have a huge margin of strength. This is an ideal choice for trophy cod, catfish and halibut fishing.

DEEP HUNTER BOAT

This is a rod specially designed for sea boat fishing or so called vertical jigging rod. This budget and lightweight fishing rod is made from a composite heavy-duty material. Blank is fitted with special guides in durable LRX frames designed to withstand extreme loads, and deep-seated Gold Cermet rings, perfectly protected against damages. Handle is made in accordance with Powered Grip Construction technology from durable fined-pored EVA. A special perforation is applied to the upper part of the handle making the grasp more comfortable. Powerful reel seat is made from solid aluminum alloy. Butt section has a gimbal for use with fight belt. This rod is ideal for rough boat fishing for trophy cod, catfish, pollack and halibut.

MBRDH210H	210	105	480	8	2	50	max 800

SEA EMPIRE BOAT

This sea rod is specially designed for catching trophy halibut, cod, ling or sea bass. Sea Empire rods are produced using the unique Multi Tip Concept the idea of which is that rods are supplied with two tips for different purposes:

1) Interline Tip (fishing line runs inside the blank) – for fishing at depths up to 100m. The blank becomes more powerful due to equal load distribution.

2) Tip with classic guides placement is ideal for fishing at depths greater than 100m where fast sinking of a lure is more important than power characteristics of a blank. Each rod of this series is supplied with two tips which makes it really universal in the very best sense of the word. You will be prepared for any situation that may arise. If you have lost or broken one tip, you can continue fishing using the second one. In fact, you will get two rods in one. Sea Empire blanks are made of IMS carbon featuring unique Power Carbon Construction providing ultimate strength which is so necessary to handle extreme load when fighting a trophy sized fish. Sea Empire rods are equipped with a quality aluminum gimbal buttcap, reliable aluminum reel seat with two clamp nuts, excellent SIC guides with modern stainless steel LC (Low Rider) frames and salt water protection. The handle is made using Powered Grip Construction technology of a durable fined-pored EVA (neoprene). A special perforation is applied to the upper part of the handle making the grasp more comfortable.

These rods are capable of more than we expect. The elastic tip absorbs jerks very well whereas the powerful butt section allows to fight a big halibut or cod.

BLANK

- Material: IMS carbon
- 2 sections + additional tip
- Конструкция - штекерная усиленная
- Reinforced put-over joint

REEL SEAT

- Reinforced screw down design with two clamping nuts

NORTH WITCH

This high quality float rod, featuring a compact travel design, will meet the demands of any avid traveler. Made of IMF carbon and fitted with lightweight high-stand Match guides with SIC center. Match guides, placed with a small interval, help distributing the load equally and guarantee that the line will never stick to the blank. The rods have Medium-Fast blanks and come with a reliable reel seat with a movable lock. Thanks to its Medium-Fast Action blank, this rod shows outstanding performance bending along the entire length, which results in minimum hook-pulls. At the end of the handle you will find an unscrewing butt cap (for drying and easy maintenance access). The rod also comes with guides protective cap.

WITCHER BOLOGNESE

This is a high quality light and strong rod with Fast action stiff blank made of IMS carbon. Rods of this series are fitted with lightweight high foot SIC guides produced in South Korea. Thanks to them the line never sticks to the blank. Due to its light weight and ideal balance an angler would never get tired during a long fishing period. And the optimal construction of a blank allows to make very accurate casts, control retrieve of a big fish and minimize the number of hookpulls or false strikes. It is suitable for all types of float fishing. It comes with a special cap for safe storage and protection of the guides during transportation. At the end of the handle you can find an unscrewed butt cap which lets you dry the rod.

MATRIX MATCH

This is a float telescopic rod of a short folded length produced in accordance with Travel Design. This concept is based on the idea of minimal travel length of a rod. Matrix-Match series is specially designed for those who love travelling. Blank is made from high modulus HMH carbon. Rods of this series are fitted with lightweight high frame SIC guides, and thanks to them the line never adheres to the blank in rainy weather. Due to large number of rod sections, it became possible to place larger number of guides and shorten the distance between them. As a result, we have improved rod performance. Ideal balance and elaborate design of this model help an angler to make long distance casts and feel confident while fighting any fish regardless of its size. All rods are equipped with guides protection cap for safe transportation.

- BLANK**

RIOT FEEDER

Maximus Riot is a series of rods for beginners made of composite material. At the same time, the rods meet the highest requirements and have excellent performance characteristics: high reliability and long distance casting. In this series, there are feeder rods with a medium action, ideally suited for fishing in still waters and on moderate currents. The lengths of the rods are ranging from 3 to 3.6 meters and they can have casting weights up to 90 grams. The Riot rods are equipped with modern EVA handles and reliable classic reel seats. They come with three quivertips of various hardness. The quivertips are fitted with functional spinning tip tops designed to prevent the line from overlapping.
